PRODUCT/PROCESS CHANGE NOTIFICATION

TYPE OF CHANGE: Design Manufacturing Other

This notification is provided in accordance with Power Integrations policy of product/process change notification. If you have any questions or need further assistance, please contact your regional Power Integrations sales office.

DESCRIPTION OF CHANGE

An improved passivation at Lapis M3, Miyazaki, Japan, a wafer foundry for Power Integrations products.

REASON FOR CHANGE

As part of a continuous improvement, Power Integrations has been working to further increase the margin of HALT (highly accelerated life testing) beyond the minimum requirement of 1,000 hr. This improvement was achieved with a slight modification of the passivation process. HALT testing is done under 85°C/85% R.H., 560V dynamic condition.

PRODUCTS AFFECTED

Products affected by the change are listed in Appendix 1.

QUALIFICATION STATUS

Refer to Appendix 2 for the qualification data.

EFFECT ON CUSTOMER

No adverse impact is expected in manufacturers' applications. The product will be guaranteed to meet the datasheet limits.

EFFECTIVE DATE

April 26, 2016. This date is subject to change. Products assembled with the wafers from the current fab will continue to be shipped after implementation of the above change.

SAMPLE AVAILABILITY

Samples will be available 10 weeks from the date of request. Please send requests for samples within two weeks after receipt of this notification to the local Power Integrations sales office. For manufacturers that request samples, an accommodation will be made in order to allow time of customer's qualification in a case-specific manner

Prepared By: Nick Stanco
Manager, Reliability Engineering*

Project Title: Qualification of Improved Passivation Process for Lapis M3, Miyazaki, Japan Wafer Fab

Summary:

Reliability testing was conducted to qualify an improved passivation process for Power Integration products fabricated in the Lapis M3, Miyazaki, Japan wafer fabrication facility. A minor passivation change was made to improve HALT performance. All required reliability stress tests were completed on three qualification lots with acceptable results. Yield and temperature characterization were completed with acceptable results for all affected products.

Based on these qualification results, the improved passivation process is now approved for production.

Qualification Vehicles: TOP261EG, TOP261YN, TNY290PG

Note 1: One invalid EOS failure occurred on lot 4F978D and two occurred on lot 4F980B. These failures were caused by faulty test hardware and were not related to the passivation change being qualified. The original 20 unit sample sizes were reduced accordingly.

Conclusion: Based on acceptable qualification results, the improved passivation process at Lapis M3 is now fully qualified and approved for production
