### Features

- Logic-selectable Output Voltage
- 100 nF Drive Capability
- 90 V<sub>P-P</sub> Maximum Output Voltage
- 25 µs Response Time

### Applications

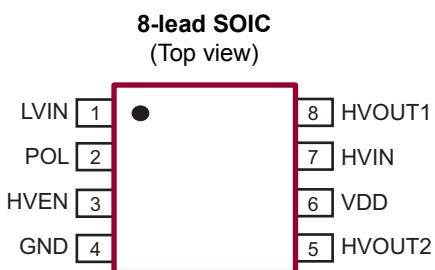

- Liquid Crystal Shutter

### General Description

The HV508 is a 45V liquid crystal shutter driver in an 8-lead SOIC surface-mount package. It is composed of two outputs that provide square waves of opposite phases. The liquid crystal shutter is connected between the two outputs. Its equivalent load can be modeled as a minimum of 1 MΩ resistor in parallel with a maximum of 0.1 uF capacitor.

The HV508 has three input supply voltages—HV<sub>IN</sub>, LV<sub>IN</sub> and V<sub>DD</sub>. The output amplitude is either LV<sub>IN</sub> or HV<sub>IN</sub>. A logic high on the HV<sub>EN</sub> input sets the output to operate from the HV<sub>IN</sub> supply. On the other hand, a logic low on the HV<sub>EN</sub> input sets the output to operate from the LV<sub>IN</sub> supply. The output frequency is determined by the logic input frequency applied to the POL input.

### Package Type

**Note the following details of the code protection feature on Microchip devices:**

- Microchip products meet the specification contained in their particular Microchip Data Sheet.
- Microchip believes that its family of products is one of the most secure families of its kind on the market today, when used in the intended manner and under normal conditions.
- There are dishonest and possibly illegal methods used to breach the code protection feature. All of these methods, to our knowledge, require using the Microchip products in a manner outside the operating specifications contained in Microchip's Data Sheets. Most likely, the person doing so is engaged in theft of intellectual property.
- Microchip is willing to work with the customer who is concerned about the integrity of their code.
- Neither Microchip nor any other semiconductor manufacturer can guarantee the security of their code. Code protection does not mean that we are guaranteeing the product as "unbreakable."

Code protection is constantly evolving. We at Microchip are committed to continuously improving the code protection features of our products. Attempts to break Microchip's code protection feature may be a violation of the Digital Millennium Copyright Act. If such acts allow unauthorized access to your software or other copyrighted work, you may have a right to sue for relief under that Act.
