

Double channel high side driver with analog current sense for automotive applications

Features

| | | |
|-----------------------------------|------------|--------------------|
| Max supply voltage | V_{CC} | 41 V |
| Operating voltage range | V_{CC} | 4.5 to 36V |
| Max On-State resistance (per ch.) | R_{ON} | 25mΩ |
| Current limitation (typ) | I_{LIMH} | 60A |
| Off-state supply current | I_S | 2µA ⁽¹⁾ |

1. Typical value with all loads connected

■ Features

- In-rush current active management by power limitation
 - Very low standby current
 - 3.0V CMOS compatible input
 - Optimized electromagnetic emission
 - Very low electromagnetic susceptibility
 - In compliance with the 2002/95/EC European directive
 - Package: ECOPACK®
- #### ■ Diagnostic functions
- Proportional load current sense
 - High current sense precision for wide range currents
 - Current sense disable
 - Thermal shutdown indication
 - Very low current sense leakage
- #### ■ Protections
- Undervoltage shutdown
 - Overvoltage clamp
 - Load current limitation
 - Self-limiting of fast thermal transients
 - Protection against loss of ground and loss of V_{CC}
 - Thermal shutdown

- Reverse battery protection (see [Application schematic^{\(1\)} on page 21](#))
- Electrostatic discharge protection

Description

The VND5025LAK-E is a monolithic device made using STMicroelectronics VIPower M0-5 technology. It is intended for driving resistive or inductive loads with one side connected to ground, and suitable for driving LEDs.

Active V_{CC} pin voltage clamp protects the device against low energy spikes (see ISO7637 transient compatibility table).

This device integrates an analog current sense which delivers a current proportional to the load current (according to a known ratio) when CS_DIS is driven low or left open.

When CS_DIS is driven high, the CURRENT SENSE pin is in a high impedance condition.

Output current limitation protects the device in overload condition. In case of long overload duration, the device limits the dissipated power to safe level up to thermal shutdown intervention. Thermal shutdown with automatic restart allows the device to recover normal operation as soon as fault condition disappears.

Table 1. Device summary

| Package | Order codes | |
|--------------|--------------|----------------|
| | Tube | Tape and reel |
| PowerSSO-24™ | VND5025LAK-E | VND5025LAKTR-E |

| | | $I_{CSD} = -1mA$ | | -0.7 | | |

Table 9. Protections and diagnostics⁽¹⁾

| Symbol | Parameter | Test conditions | Min | Typ | Max | Unit |
|------------|----------------------------------------------|-------------------------------------------|-----|-----|-----|------|
| I_{LIMH} | DC short circuit current | $V_{CC} = 13V$ | | | | A |
| | | $5V < V_{CC} < 36V$ | | | | |
| I_{LIML} | Short circuit current during thermal cycling | $V_{CC} = 13V$; $T_R < T_j < T_{TSD}$ | | | | |

Table 9. Protections and diagnostics⁽¹⁾ (continued)

| Symbol | Parameter | Test conditions | Min | Typ | Max | Unit |
|-------------|-----------------------------------------|--------------------------------------------------------------------------------------|---------------|---------------|---------------|------|
| T_{TSD} | Shutdown temperature | | 150 | 175 | 200 | °C |
| T_R | Reset temperature | | $T_{RS} + 1$ | $T_{RS} + 5$ | | |
| T_{RS} | Thermal reset of STATUS | | 135 | | | |
| T_{HYST} | Thermal hysteresis ($T_{TSD}-T_R$) | | | 7 | | |
| V_{DEMAG} | Turn-off output voltage clamp | $I_{OUT} = 2A$; $V_{IN} = 0$; $L = 6mH$ | $V_{CC} - 41$ | $V_{CC} - 46$ | $V_{CC} - 52$ | V |
| V_{ON} | Output voltage drop limitation | $I_{OUT} = 0.2A$; $T_j = -40^\circ C$ to $150^\circ C$ (see <i>Figure 9</i>) | | | | mV |

1. To ensure long term reliability under heavy overload or short circuit conditions, protection and related diagnostic signals must be used together with a proper software strategy. If the device is subjected to abnormal conditions, this software must limit the duration and number of activation cycles.

Table 10. Current sense ($8V < V_{CC} < 16V$)

3 Application information

Figure 26. Application schematic⁽¹⁾

1. Channel 2 has the same internal circuit as channel 1

3.1 GND protection network against reverse battery

This section provides two solutions for implementing a ground protection network against reverse battery.

3.1.1 Solution 1: Resistor in the ground line (R_{GND} only)

This first solution can be used with any type of load.

The following formulas indicate how to dimension the R_{GND} resistor:

1. $R_{GND} \leq 600\text{mV} / (I_{S(on)\max})$
2. $R_{GND} \geq (-V_{CC}) / (-I_{GND})$

where $-I_{GND}$ is the DC reverse ground pin current and can be found in the absolute maximum rating section of the device datasheet.

Power Dissipation in R_{GND} (when $V_{CC} < 0$ during reverse battery situations) is:

$$P_D = (-V_{CC})^2 / R_{GND}$$

This resistor can be shared among several different HSDs. Please note that the value of this resistor is calculated with formula (1), where $I_{S(on)\max}$ becomes the sum of the maximum on-state currents of the different devices.

Please note that if the microprocessor ground is not shared by the device ground, the R_{GND} produces a shift ($I_{S(on)\max} * R_{GND}$) in the input thresholds and the status output values. This shift varies depending on how many devices are ON in the case of several high-side drivers sharing the same R_{GND} .

If the calculated power dissipation leads to a large resistor or several devices have to share the same resistor, then ST suggests to utilize the following Solution 2.

3.1.2 Solution 2: Diode (D_{GND}) in the ground line

If the device drives an inductive load, insert a resistor ($R_{GND} = 1\text{k}\Omega$) in parallel to D_{GND} .

This small signal diode can be safely shared among several different HSDs. Also in this case, the presence of the ground network produces a shift ($\approx 600\text{mV}$) in the input threshold and in the status output values if the microprocessor ground is not common to the device ground. This shift does not vary if more than one HSD shares the same diode/resistor network.

3.2 Load dump protection

D_{ld} is necessary (Voltage Transient Suppressor) if the load dump peak voltage exceeds the V_{CC} maximum DC rating. The same applies if the device is subject to transients on the V_{CC} line that are greater than the ones shown in the ISO 7637-2:2004E table.

3.3 Microcontroller I/Os protection

If a ground protection network is used and negative transients are present on the V_{CC} line, the control pins are pulled negative. ST suggests to insert an in-line resistor (R_{prot}) to prevent the μC I/Os pins from latch-up.

The value of these resistors is a compromise between the leakage current of μC and the current required by the HSD I/Os (input levels compatibility) with the latch-up limit of μC I/Os.

$$-V_{CCpeak}/I_{latchup} \leq R_{prot} \leq (V_{OH\mu C} - V_{IH} - V_{GND}) / I_{IHmax}$$

Calculation example:

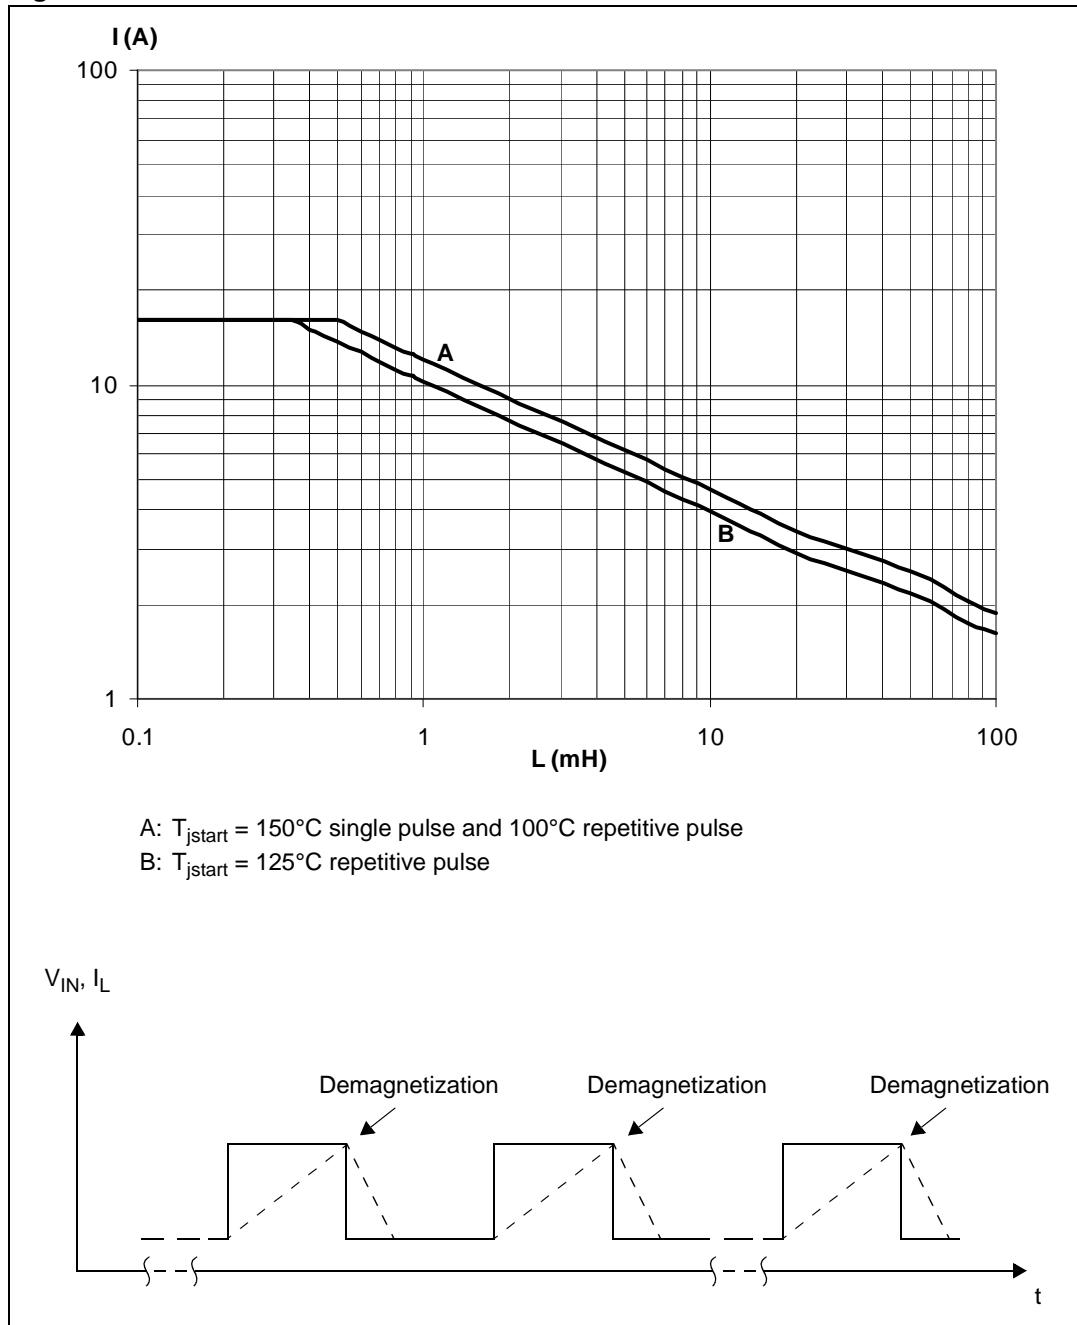

For $V_{CCpeak} = -100\text{V}$ and $I_{latchup} \geq 20\text{mA}$; $V_{OH\mu C} \geq 4.5\text{V}$

$$5\text{k}\Omega \leq R_{prot} \leq 65\text{k}\Omega$$

Recommended values: $R_{prot} = 10\text{k}\Omega$, $C_{EXT} = 10\text{nF}$

3.4 Maximum demagnetization energy ($V_{CC} = 13.5V$)

Figure 27. Maximum turn-off current versus inductance⁽¹⁾

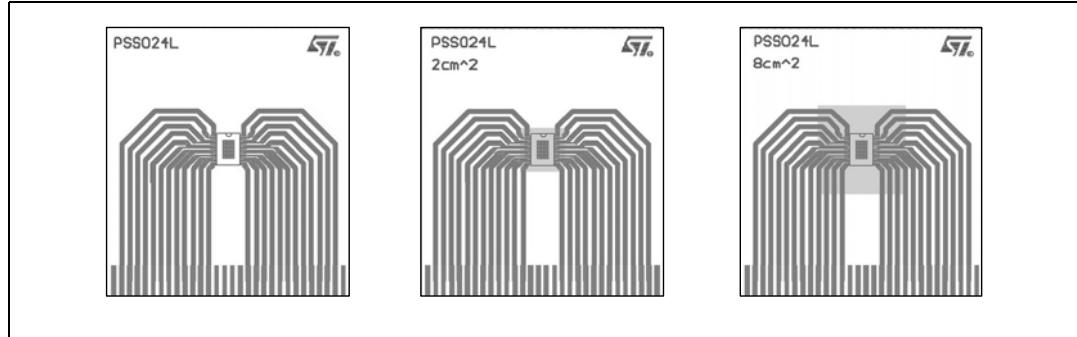

1. Values are generated with $R_L = 0\Omega$
In case of repetitive pulses, T_{jstart} (at beginning of each demagnetization) of every pulse must not exceed the temperature specified above for curves A and B.

4 Package and thermal data

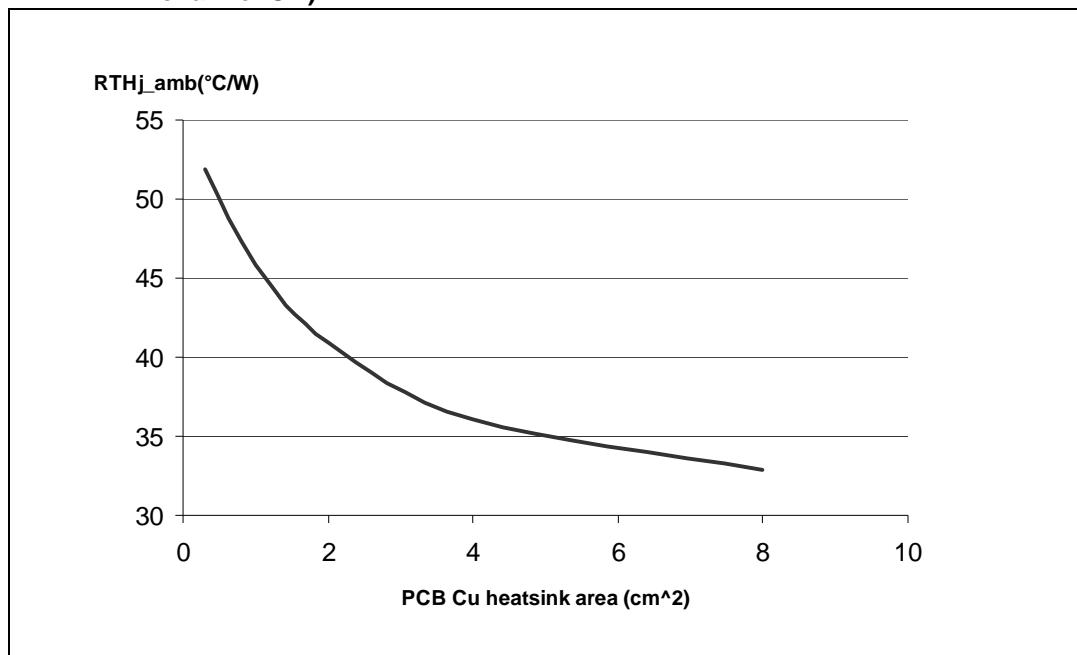

4.1 PowerSSO-24™ thermal data

Figure 28. PowerSSO-24™ PC board⁽¹⁾

1. Layout condition of R_{th} and Z_{th} measurements (PCB: Double layer, Thermal Vias, FR4 area = 77mm x 86mm, PCB thickness = 1.6mm, Cu thickness = 70μm (front and back side), Copper areas: from minimum pad layout to 8cm²).

Figure 29. $R_{thj\text{-}amb}$ vs PCB copper area in open box free air condition (with one channel ON)

Equation 1: pulse calculation formula

$$Z_{TH\delta} = R_{TH} \cdot \delta + Z_{THtp}(1 - \delta)$$

where $\delta = t_p/T$

5 Package and packing information

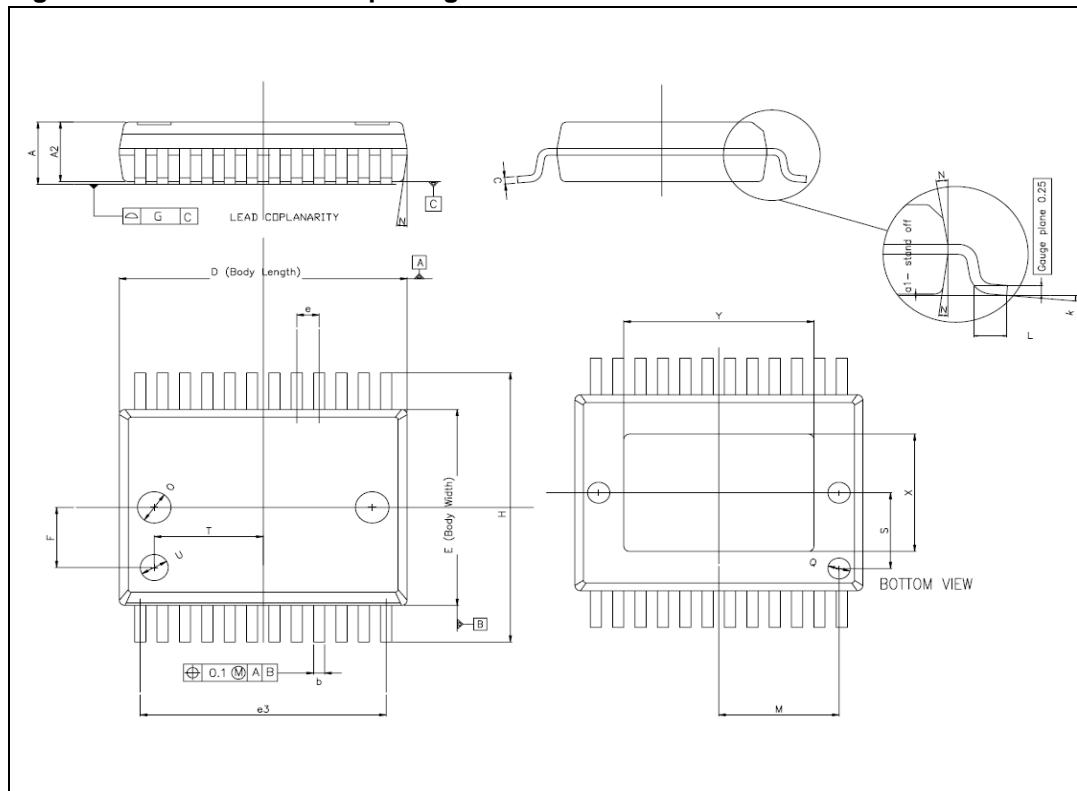

5.1 ECOPACK® packages

In order to meet environmental requirements, ST offers these devices in different grades of ECOPACK® packages, depending on their level of environmental compliance. ECOPACK® specifications, grade definitions and product status are available at: www.st.com.

ECOPACK® is an ST trademark.

5.2 PowerSSO-24 mechanical data

6 Revision history

Table 17. Document revision history

| Date | Revision | Changes |
|-------------|----------|-----------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
| 16-Feb-2007 | 1 | Initial release |
| 23-Feb-2007 | 2 | <i>Figure 10: Current sense (8V < VCC < 16V)</i> : error in dK3/K3 current sense ratio drift row corrected. |
| 28-Mar-2007 | 3 | Protection section updated to correct editing error. |
| 02-Jul-2009 | 4 | Updated <i>Table 16: PowerSSO-24™ mechanical data</i> |
| 23-Jul-2009 | 5 | Updated <i>Figure 32: PowerSSO-24™ package dimensions</i> . Updated <i>Table 16: PowerSSO-24™ mechanical data</i> : – Deleted G1 row – Added O, Q, S, T and U rows |
| 20-Sep-2013 | 6 | Updated disclaimer. |

Please Read Carefully:

Information in this document is provided solely in connection with ST products. STMicroelectronics NV and its subsidiaries ("ST") reserve the right to make changes, corrections, modifications or improvements, to this document, and the products and services described herein at any time, without notice.

All ST products are sold pursuant to ST's terms and conditions of sale.

Purchasers are solely responsible for the choice, selection and use of the ST products and services described herein, and ST assumes no liability whatsoever relating to the choice, selection or use of the ST products and services described herein.

No license, express or implied, by estoppel or otherwise, to any intellectual property rights is granted under this document. If any part of this document refers to any third party products or services it shall not be deemed a license grant by ST for the use of such third party products or services, or any intellectual property contained therein or considered as a warranty covering the use in any manner whatsoever of such third party products or services or any intellectual property contained therein.

UNLESS OTHERWISE SET FORTH IN ST'S TERMS AND CONDITIONS OF SALE ST DISCLAIMS ANY EXPRESS OR IMPLIED WARRANTY WITH RESPECT TO THE USE AND/OR SALE OF ST PRODUCTS INCLUDING WITHOUT LIMITATION IMPLIED WARRANTIES OF MERCHANTABILITY, FITNESS FOR A PARTICULAR PURPOSE (AND THEIR EQUIVALENTS UNDER THE LAWS OF ANY JURISDICTION), OR INFRINGEMENT OF ANY PATENT, COPYRIGHT OR OTHER INTELLECTUAL PROPERTY RIGHT.

ST PRODUCTS ARE NOT DESIGNED OR AUTHORIZED FOR USE IN: (A) SAFETY CRITICAL APPLICATIONS SUCH AS LIFE SUPPORTING, ACTIVE IMPLANTED DEVICES OR SYSTEMS WITH PRODUCT FUNCTIONAL SAFETY REQUIREMENTS; (B) AERONAUTIC APPLICATIONS; (C) AUTOMOTIVE APPLICATIONS OR ENVIRONMENTS, AND/OR (D) AEROSPACE APPLICATIONS OR ENVIRONMENTS. WHERE ST PRODUCTS ARE NOT DESIGNED FOR SUCH USE, THE PURCHASER SHALL USE PRODUCTS AT PURCHASER'S SOLE RISK, EVEN IF ST HAS BEEN INFORMED IN WRITING OF SUCH USAGE, UNLESS A PRODUCT IS EXPRESSLY DESIGNATED BY ST AS BEING INTENDED FOR "AUTOMOTIVE, AUTOMOTIVE SAFETY OR MEDICAL" INDUSTRY DOMAINS ACCORDING TO ST PRODUCT DESIGN SPECIFICATIONS. PRODUCTS FORMALLY ESCC, QML OR JAN QUALIFIED ARE DEEMED SUITABLE FOR USE IN AEROSPACE BY THE CORRESPONDING GOVERNMENTAL AGENCY.

Resale of ST products with provisions different from the statements and/or technical features set forth in this document shall immediately void any warranty granted by ST for the ST product or service described herein and shall not create or extend in any manner whatsoever, any liability of ST.
