

Vectron's VC-806 Crystal Oscillator is a quartz stabilized, differential output oscillator, operating off either a 2.5 or 3.3 volt supply in a hermetically sealed 5.0x3.2 mm ceramic package.

Features

- Ultra Low Jitter Performance
- Fundamental or 3rd OT Crystal Design
- Output Frequencies to 250.000MHz
- <0.7 ps RMS jitter, 12kHz-20MHz
- Differential Output
- Enable/Disable
- -10/70°C, -40/85°C and -40/105°C Operating Temperature Range
- Hermetically Sealed 5.0x3.2 mm Ceramic Package
- Product is compliant to RoHS directive and fully compatible with lead free assembly

Applications

- Storage Area Networking
- Telecom
- Ethernet, GE, SynchE
- Fiber Channel
- PON
- Driving A/D's, D/A's, FPGA's
- Test and Measurement
- Medical
- COTS

Output Enabled [®] Output Disabled	V _{IH} V _{IL}	0.7*V _{DD}		0.3*V _{DD}	V V
Enable/Disable Time	t _D			200	ns
Enable/Disable Leakage Current				±200	uA
Enable Pull-Up Resistor Output Enabled Output Disabled			33 1		KOhm MOhm
Start-Up Time	t _{su}			10	ms
Operating Temperature Range (Ordering Option) ⁹	T _{op}	-10/70	0 or -40/85 or -4	0/105	°C
Package Size			5.0 x 3.2 x 1.3		mm

1. The VC-806 power supply pin should be filtered, eg, a 0.1 and 0.01 uf capacitor.

2. See Standard Frequencies and Ordering Information for more information.

3. Includes calibration tolerance, operating temperature, supply voltage variations, aging and IR reflow.

4. Figure 1 shows the test circuit and Figure 2 defines these parameters.

5. Duty Cycle is defines as the On/Time Period.

6. Measured using an Agilent E5052 Signal Source Analyzer at 25 °C. Phase Jitter will be 1.0ps (max) for carrier frequencies between 25MHz and 100MHz. Above 100MHz carrier frequency, phase jitter will be 0.7ps (max).

7. Measured using a Wavecrest SIA3300C, 90K samples.

8. Outputs will be Enabled if Enable/Disable is left open.

9. Only ±50ppm and ±100ppm stability options are available for -40 °C to 105 °C operating temperature range.

LVPECL Application Diagrams

Figure 6 - Standard PECL Output Configuration **Figure 7 - Single Resistor Termination Scheme** Resistor values are typically 140 ohms for 3.3V operation. Resistor values are typically 84 for 2.5V operation. **Figure 8 - Pull-Up Pull Down Termination** Resistor values are typically for 3.3V operation For 2.5V operation, the resistor to ground is 62 ohms and the resistor to supply is 240 ohms

130Ω

โตอก

The VC-806 incorporates a standard PECL output scheme, which are un-terminated emitters as shown in Figure 6. There are numerous application notes on terminating and interfacing PECL logic and the two most common methods are a single resistor to ground, Figure 7, and a pull-up/pull-down scheme as shown in Figure 8. An AC coupling capacitor is optional, depending on the application and the input logic requirements of the next stage.

LVDS Application Diagrams

Figure 9 - Standard LVDS

Output Configuration

Figure 10 - LVDS to LVDS Connection, Internal 100ohm Some LVDS structures have an internal 100 ohm resistor on the input and do not need additional components.

Figure 11 - LVDS to LVDS Connection External 100ohm and AC blocking caps

Some input structures may not have an internal 100 ohm resistor on the input and will need an external 100ohm resistor for impedance matching. Also, the input may have an internal DC bias which may not be compatible with LVDS levels, AC blocking capacitors can be used.

One of the most important considerations is terminating the Output and Complementary Outputs equally. An unused output should not be left un-terminated, and if it one of the two outputs is left open it will result in excessive jitter on both. PC board layout must take this and 50 ohm impedance matching into account. Load matching and power supply noise are the main contributors to jitter related problems.

Environmental and IR Compliance

Table 5. Environmental Compliance					
Parameter	Condition				
Mechanical Shock	MIL-STD-883 Method 2002				
Mechanical Vibration	MIL-STD-883 Method 2007				
Temperature Cycle	MIL-STD-883 Method 1010				
Solderability	MIL-STD-883 Method 2003				
Fine and Gross Leak	MIL-STD-883 Method 1014				
Resistance to Solvents	MIL-STD-883 Method 2015				
Moisture Sensitivity Level	MSL1				
Contact Pads	Gold over Nickel Thickness of Gold: ~0.3um to 1.0um Thickness of Nickel: ~1.27um to 8.89um				
Weight	57 mg				

Page5

IR Compliance

Suggested IR Profile

Devices are built using lead free epoxy and can be subjected to standard lead free IR reflow conditions shown in Table 6. Contact pads are gold over nickel and lower maximum temperatures can also be used, such as 220C.

Table 6. Reflow Profile		
Parameter	Symbol	Value
PreHeat Time	t	200 sec Max
Ramp Up	R _{up}	3°C/sec Max
Time above 217°C	tL	150 sec Max
Time to Peak Temperature	t _{AMB-P}	480 sec Max
Time at 260°C	t _p	30 sec Max
Time at 240°C	t _{P2}	60 sec Max
Ramp down	R _{DN}	6°C/sec Max

Solderprofile:

Maximum Ratings, Tape & Reel

Absolute Maximum Ratings and Handling Precautions

Stresses in excess of the absolute maximum ratings can permanently damage the device. Functional operation is not implied or any other excess of conditions represented in the operational sections of this data sheet. Exposure to absolute maximum ratings for extended periods may adversely affect device reliability.

Although ESD protection circuitry has been designed into the VC-806, proper precautions should be taken when handling and mounting, Vectron employs a Human Body Model and Charged Device Model for ESD susceptibility testing and design evaluation. ESD thresholds are dependent on the circuit parameters used to define the model. Although no industry standard has been adopted for the CDM a standard resistance of 1.5kOhms and capacitance of 100pF is widely used and therefor can be used for comparison purposes.

Table 7 Maximum Ratings			
Parameter	Symbol	Rating	Unit
Storage Temperature	T _{STORE}	-55/125	°C
Supply Voltage	V _{DD}	-0.5 to 5.0	V
Enable Disable Voltage	E/D	-0.5 to V _{DD} +0.5	V
ESD, Human Body Model	НВМ	1500	V
ESD, Charged Device Model	CDM	1000	V

Table 8. Tape and Reel Information

Ordering Information

Notes:

- a) Only \pm 50ppm and \pm 100ppm stability options are available over -40/105°C operating temperature range.
- b) Stability option of ±20ppm is available. But it does not include aging and reflow.
- c) Not all combinations of ordering options are available. Other specifications may be available upon request. Please consult with Vectron Applications Team.
- d) Ordering information for frequency is xxxMxxxxxx or xxMxxxxxx depending on the oscillator frequency

Example: VC-806-EDE-KAAN-125M000000TR Tape and Reel VC-806-EDE-KAAN-125M000000 Cut Tape VC-806-EDE-KAAN-125M000000_SNPB Tin lead solder dipped

Revision History

Revision Date	Approved	Description
2009 - 2011	FB, TG	Initial Datasheet, Minor modifications
Oct 21, 2013	TG	Updated Vectron Asia contact information
Feb 07, 2014	TG	Vectron Knowles Logo
May 13, 2015	VN	Modified Marking Information in Package Drawing
Mar 18, 2016	VN	Updated Standard Frequencies Table (Table 8) - Added 3 new frequencies
Aug 24, 2016	VN	Changed Maximum Frequency to 250MHz. Removed 312.5MHz from Frequency Table 8.
Jan 17, 2017	RC	Changed reflow profile to indicate 30s (max.) for time at 260 °C. However, Incorrect version of VC-806 design file used to create datasheet which was loaded in website.
Sep 22, 2017	VN	Added extended temperature option, termination finish information, added notes for phase jitter and stability, added notes under ordering options, updated T&R dimensions.
May 10, 2019	FB	Update logo and contact information, add _SNPB ordering details
April 30, 2020	FB	Add tape and reel ordering option
