

Features

- Operating Frequency up to 150 MHz
- Low-Noise Phase-Locked Loop Clock Distribution that meets 133 MHz Registered DIMM Synchronous DRAM modules for server/workstation/PC applications
- Allows Clock Input to have Spread Spectrum modulation for EMI reduction
- Zero Input-to-Output delay: Distribute one Clock Input to one Bank of Ten outputs, with an output enable.
- Low jitter: Cycle-to-Cycle jitter ±75ps max.
- On-chip series damping resistor at clock output drivers for low noise and EMI reduction
- Operates at 3.3V V_{CC}
- Packaging(Pb-free & Green available): -24-pin TSSOP(L)

Description

The PI6C2510-133 is a "quiet," low-skew, low-jitter, phase-locked loop (PLL) clock driver, distributing high-frequency clock signals for SDRAM and server applications. By connecting the feedback FB_OUT output to the feedback FB_IN input, the propagation delay from the CLK_IN input to any clock output will be nearly zero. This zero-delay feature allows the CLK_IN input clock to be distributed, providing one clock input to one bank of ten outputs, with an output enable.

This clock driver is designed to meet the PC133 SDRAM Registered DIMM specification. For test purposes, the PLL can be bypassed by strapping AV_{CC} to ground.

Pin Functions

Pin Name	Pin Number	Туре	Description
CLK_IN	24	Ι	Reference Clock input. CLK_IN allows spread spectrum.
FB_IN	13	Ι	Feedback input. FB_IN provides the feedback signal to the internal PLL
G	11	Ι	Output bank enable. When G is LOW, outputs Y[0:9] are disabled to a logic low state. When G is HIGH, all outputs Y[0:9] are enabled.
FB_OUT	12	0	Feedback output. FB_OUT is dedicated for external feedback. FB_OUT has an embedded series-damping resistor of the same value as the clock outputs Y[0.9].
Y[0:9]	3,4,5,8,9,15 16,17,20,21	О	Clock outputs. These outputs provide low-skew copies of CLK_IN. Each output has an embedded series-damping resistor.
AV _{CC}	23	Power	Analog power supply. AV_{CC} can be also used to bypass the PLL for test purposes. When AV_{CC} is strapped to ground, PLL is bypassed and CLK_IN buffered directly to the device outputs.
AGND	1	Ground	Analog ground. AGND provides the ground reference for the analog circuitry.
V _{CC}	2,10,14,22	Power	Power supply
GND	6,7,18,19	Ground	Ground
