## ABSOLUTE MAXIMUM RATINGS

**Table 4.**

Parameter <sup>1</sup>	Rating
Drain Bias Voltage ( $V_{DD}$ )	7 V
Radio Frequency Input ( $RF_{IN}$ ) Power	20 dBm
Channel Temperature	175°C
Continuous Power Dissipation ( $P_{DISS}$ , T = 85°C (Derate 8.7 mW/°C Above 85°C))	0.78 W
Storage Temperature Range	-65°C to +150°C
Operating Temperature Range	-40°C to +85°C
Electrostatic Discharge (ESD) Sensitivity Human Body Model (HBM)	500 V, Class 1B passed

<sup>1</sup> When referring to a single function of a multifunction pin in the parameters, only the portion of the pin name that is relevant to the specification is listed. For full pin names of multifunction pins, refer to the [Pin Configuration and Function Descriptions](#) section.

Stresses at or above those listed under Absolute Maximum Ratings may cause permanent damage to the product. This is a stress rating only; functional operation of the product at these or any other conditions above those indicated in the operational section of this specification is not implied. Operation beyond the maximum operating conditions for extended periods may affect product reliability.

## THERMAL RESISTANCE

Thermal performance is directly linked to printed circuit board (PCB) design and operating environment. Close attention to PCB thermal design is required.

$\theta_{JC}$  is the junction to case thermal resistance.

**Table 5. Thermal Resistance**

Package Type	$\theta_{JC}$	Unit
CP-6-12	115.35	°C/W

## ESD CAUTION

**ESD (electrostatic discharge) sensitive device.** Charged devices and circuit boards can discharge without detection. Although this product features patented or proprietary protection circuitry, damage may occur on devices subjected to high energy ESD. Therefore, proper ESD precautions should be taken to avoid performance degradation or loss of functionality.

**PIN CONFIGURATION AND FUNCTION DESCRIPTIONS**

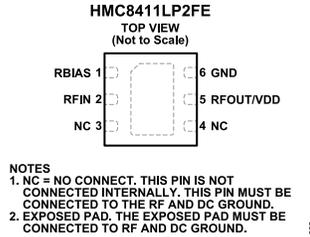

Figure 2. Pin Configuration

Table 6. Pin Function Descriptions

Pin No.	Mnemonic	Description
1	RBIAS	Bias Setting Resistor. Connect a resistor between RBIAS and VDD to set the quiescent drain current. See Figure 3 for the interface schematic.
2	RFIN	RF Input. The RFIN pin is ac-coupled and matched to 50 Ω. See Figure 4 for the interface schematic.
3, 4	NC	No Connect. This pin is not connected internally. For normal operation, this pin should be connected to ground.
5	RFOUT/VDD	RF Output and Drain Bias Voltage: The RF output is dc coupled and also serves as the drain biasing node. Connect a dc bias network to provide the drain current and ac-couple the RF output path. See Figure 5 for the interface schematic.
6	GND	Ground. This pin must be connected to the RF and dc ground. See Figure 6 for the interface schematic.
	EPAD	Exposed Ground Paddle. Connect the exposed Paddle to a ground plane which has low electrical and thermal impedance.

## THEORY OF OPERATION

The HMC8411LP2FE is a GaAs, MMIC, pHEMT, low noise wide-band amplifier.

The HMC8411LP2FE has single-ended input and output ports with impedances that nominally equal  $50\ \Omega$  over the 0.01 GHz to 10 GHz frequency range. As a result, the device can be directly inserted into a  $50\ \Omega$  system with external components on the RF input and output, as shown in Figure 70, without narrow-banded matching solutions. An external bias inductor and dc blocking capacitor are required on the VDD/RFOUT pin. A dc blocking capacitor is also required on the RFIN pin. On the RF input, there is an additional resistor, inductor, and capacitor (RLC) shunt network that ensures unconditional stability below 100 MHz. The bias current of

the device is set by a resistor that is connected between the RBIAS pin and the supply voltage.

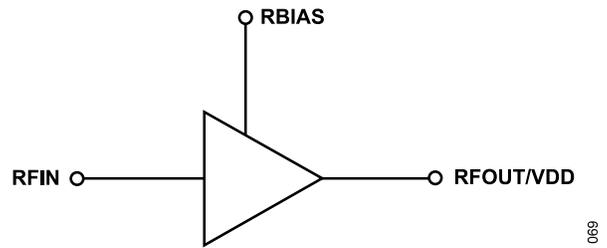

Figure 69. Simplified HMC8411LP2FE Block Diagram

069

## APPLICATIONS INFORMATION

The basic connections for operating the HMC8411LP2FE are shown in Figure 70. AC couple the input and output of the HMC8411LP2FE with appropriately sized capacitors. 100 nF capacitors are recommended (ATC531Z104KT16T). A 5 V dc bias is supplied to the amplifier through the choke inductor connected to the VDD/RFOUT pin.

A 1.1 k $\Omega$  resistor connected between the RBIAS pin and the 5 V supply voltage sets the bias current to 55 mA .

Refer to Table 7 and Figure 68 for the recommended resistor values to set different bias currents.

## RECOMMENDED BIAS SEQUENCING

### During Power-Up

The recommended bias sequence during power-up follows:

1. Set  $V_{DD}$  to 5 V.
2. Apply the RF signal.

### During Power-Down

The recommended bias sequence during power-down follows:

1. Turn off the RF signal.
2. Set  $V_{DD}$  to 0 V.

Table 7. Recommended Bias Resistor Values

$R_{BIAS}$ ( $\Omega$ )	$I_{DQ}$ (mA)	$I_{DQ\_AMP}$ (mA)	$I_{RBIAS}$ (mA)
400	80	75.97	4.03
510	75	71.32	3.68
635	70	66.64	3.36
780	65	61.95	3.05
960	60	57.27	2.73
1100	55	52.47	2.53
1400	50	47.82	2.18
1800	45	43.16	1.84
2270	40	38.45	1.55
3000	35	33.75	1.25
4000	30	29.15	0.85
5700	25	24.93	0.07
9000	20	19.95	0.05

## TYPICAL APPLICATION CIRCUIT

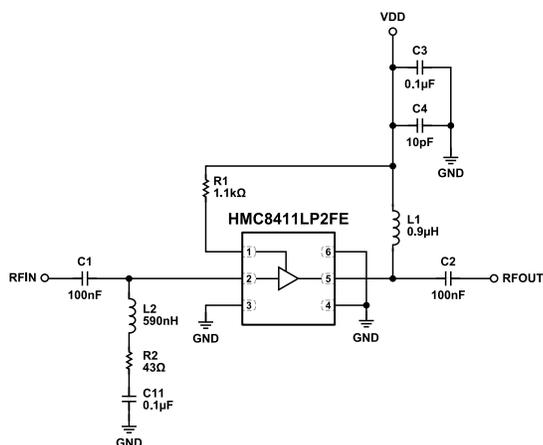

Figure 70. Typical Application Circuit

EVALUATION BOARD

The EV1HMC8411LP2F evaluation board is a 4-layer board fabricated using Rogers 4350 and using best practices for high frequency RF design. The RF input and RF output traces have a 50 Ω characteristic impedance.

The evaluation board and populated components operate over the -40°C to +85°C ambient temperature range. For proper bias sequence, see the [Applications Information](#) section.

The evaluation board schematic is shown in [Figure 72](#).
