

## Automotive 5V, 500mA low drop voltage regulator

### Datasheet - production data

## Features

|                              |              |                    |
|------------------------------|--------------|--------------------|
| Max DC supply voltage        | $V_S$        | 40V                |
| Max output voltage tolerance | $\Delta V_o$ | +/-2%              |
| Max dropout voltage          | $V_{dp}$     | 500mV              |
| Output current               | $I_o$        | 500mA              |
| Quiescent current            | $I_{qn}$     | 3µA <sup>(1)</sup> |

1. Typical value with regulator disabled

- AEC-Q100 qualified
- Operating DC supply voltage range 5.6 V to 31 V
- Low dropout voltage
- Low quiescent current consumption
- Reset circuit sensing of output voltage down to 1 V
- Programmable reset pulse delay with external capacitor
- Programmable watchdog timer with external capacitor
- Thermal shutdown and short circuit protection

- Wide temperature range ( $T_j = -40^{\circ}\text{C}$  to  $150^{\circ}\text{C}$ )
- Enable input for enabling/disabling the voltage regulator

## Description

L4995 is a family of monolithic integrated 5 V voltage regulators with a low drop voltage at currents of up to 500 mA, available in both 12 and 24 pin packages.

The output voltage regulating element consists of a p-channel MOS and regulation is performed regardless of input voltage transients of up to 40V.

The high precision of the output voltage is obtained using a pre-trimmed reference voltage. The L4995 family is protected against short circuit and overtemperature protection switches off the devices in the case of extremely high power dissipation. The L4995 integrates the watchdog, enable and externally programmable reset circuits. The L4995A features the externally programmable reset and enable. Finally the L4995R features the externally programmable reset.

The combination of such features makes this device particularly flexible and suitable to supply microprocessor systems in automotive applications.

**Table 1. Device summary**

| Package                   | Order codes                |                                  |        |
|---------------------------|----------------------------|----------------------------------|--------|
|                           | Tube                       | Tape and reel                    |        |
| PowerSSO-12 (exposed pad) | L4995J - L4995AJ - L4995RJ | L4995JTR - L4995AJTR - L4995RJTR |        |
| PowerSSO-24 (exposed pad) | L4995K - L4995AK - L4995RK | L4995KTR - L4995AKTR - L4995RKTR |        |
| P/N                       | Watchdog                   | Reset                            | Enable |
| L4995J - L4995K           | X                          | X                                | X      |

## 2 Electrical specifications

### 2.1 Absolute maximum ratings

Stressing the device above the rating listed in the “Absolute maximum ratings” table may cause permanent damage to the device. These are stress ratings only and operation of the device at these or any other conditions above those indicated in the Operating sections of this specification is not implied. Exposure to Absolute Maximum Rating conditions for extended periods may affect device reliability. Refer also to the STMicroelectronics SURE Program and other relevant quality documents.

**Table 3. Absolute maximum ratings**

| Symbol         | Parameter                            | Value                    | Unit |
|----------------|--------------------------------------|--------------------------|------|
| $V_{Vsd}$      | DC supply voltage                    | - 0.3 to 40              | V    |
| $I_{Vsd}$      | Input current                        | Internally limited       |      |
| $V_{Vo}^{(1)}$ | DC output voltage                    | - 0.3 to 6               | V    |
| $I_{Vo}$       | DC output current                    | Internally limited       |      |
| $V_{Wi}$       | Watchdog input voltage               | -0.3 to $V_{Vo} + 0.3$   | V    |
| $V_{od}$       | $R_{es}$ output voltage              | -0.3 to $V_{Vo} + 0.3$   | V    |
| $I_{od}$       | $R_{es}$ output current              | Internally limited       |      |
| $V_{cr}$       | $V_{cr}$ voltage                     | - 0.3 to $V_{Vo} + 0.3$  | V    |
| $V_{cw}$       | Watchdog delay voltage               | - 0.3 to $V_{Vo} + 0.3$  | V    |
| $V_{En}$       | Enable input                         | - 0.3 to $V_{Vsd} + 0.3$ | V    |
| $T_j$          | Junction temperature                 | - 40 to 150              | C    |
| $V_{ESD}$      | ESD voltage level (HBM-MIL STD 883C) | $\pm 2$                  | kV   |
| $V_{ESD}$      | ESD voltage level (CDM AEC-Q100-011) | 750                      | V    |

1. Using the typical application schematic with  $Cout = 10 \mu F$  and  $Iout = 0 A$ , when the regulator is switched-on, an overshoot exceeding 6 V could occur. This behavior does not impact the reliability of the regulator.

## 2.2 Thermal data

For details, please refer to [Section 4.1: PowerSSO-12 thermal data](#) and [Section 4.2: PowerSSO-24 thermal data](#).

**Table 4. Thermal data<sup>(1)</sup>**

| Symbol         | Parameter   | Value    | Unit         |
|----------------|---|----------|--------------|
| $R_{thj-case}$ | Thermal resistance Junction to Case:<br>PowerSSO-12<br>PowerSSO-24    | 5<br>4   | °K/W<br>°K/W |
| $R_{thj-amb}$  | Thermal resistance Junction to Ambient:<br>PowerSSO-12<br>PowerSSO-24 | 52<br>38 | °K/W<br>°K/W |

1. The values quoted are for PCB 77mm x 86mm x 1.6mm, FR4, double layer; Copper thickness 0.070mm Copper area 3cm<sup>2</sup> Thermal Vias, Thermal vias separation 1.2 mm, Thermal via diameter 0.3 mm +/- 0.08 mm, Cu thickness on vias 0.025 mm.

## 2.3 Electrical characteristics

Values specified in this section are for  $V_S = 5.6V$  to  $31V$ ,  $T_j = -40$  °C to  $+150$  °C unless otherwise stated.

**Table 5. General**

| Pin        | Symbol          | Parameter                                   | Test condition                               | Min. | Typ. | Max. | Unit |
|------------|-----------------|---|--|------|------|------|------|
| $V_o$      | $V_{o\_ref}$    | Output voltage                              | $V_S = 5.6$ to $31V$<br>$I_o = 0$ to $500mA$ | 4.9  | 5.00 | 5.1  | V    |
| $V_o$      | $I_{short}$     | Short circuit current                       | $V_S = 13.5V$ <sup>(1)</sup>                 | 550  | 800  | 1050 | mA   |
| $V_o$      | $I_{lim}^{(2)}$ | Output current limitation                   | $V_S = 13.5V$ <sup>(1)</sup>                 | 600  | 900  | 1250 | mA   |
| $V_S, V_o$ | $V_{line}$      | Line regulation voltage                     | $V_S = 5.6$ to $31V$<br>$I_o = 0$ to $500mA$ |      |      | 25   | mV   |
| $V_o$      | $V_{load}$      | Load regulation voltage                     | $I_o = 0$ to $500mA$                         |      |      | 25   | mV   |
| $V_S, V_o$ | $V_{dp}^{(3)}$  | Drop voltage                                | $I_o = 400mA$                                |      | 270  | 500  | mV   |
| $V_S, V_o$ | SVR             | Ripple rejection                            | $f_r = 100$ Hz <sup>(4)</sup>                | 55   |      |      | dB   |

## 2.5 Test circuit and waveforms plot

### 2.5.1 Load regulation

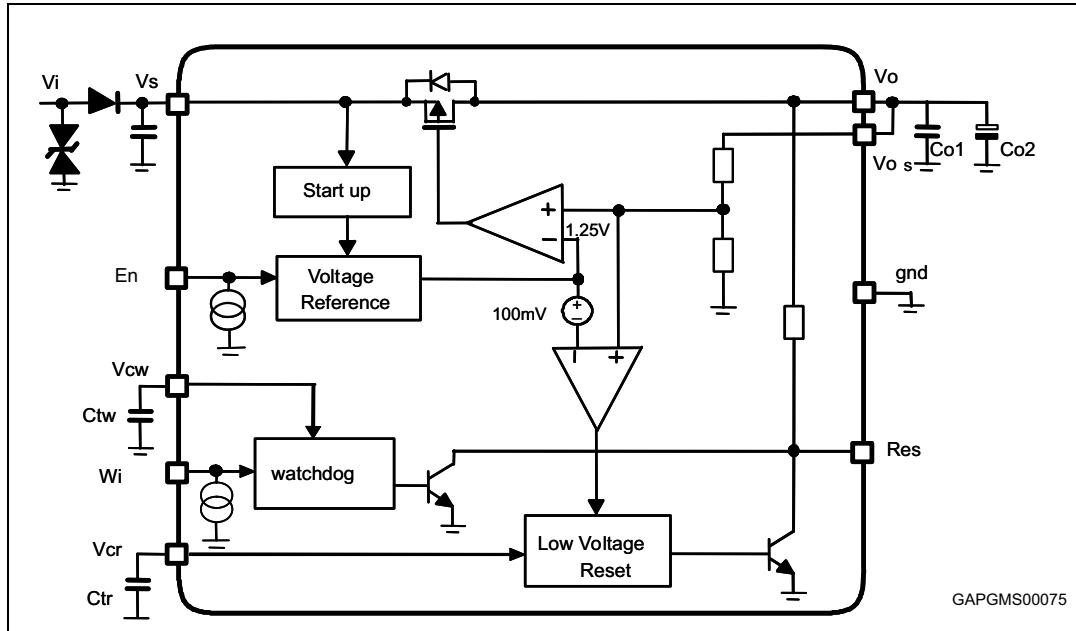

Figure 24. Load regulation test circuit

**Figure 25. Maximum load variation response**

### 3 Application information

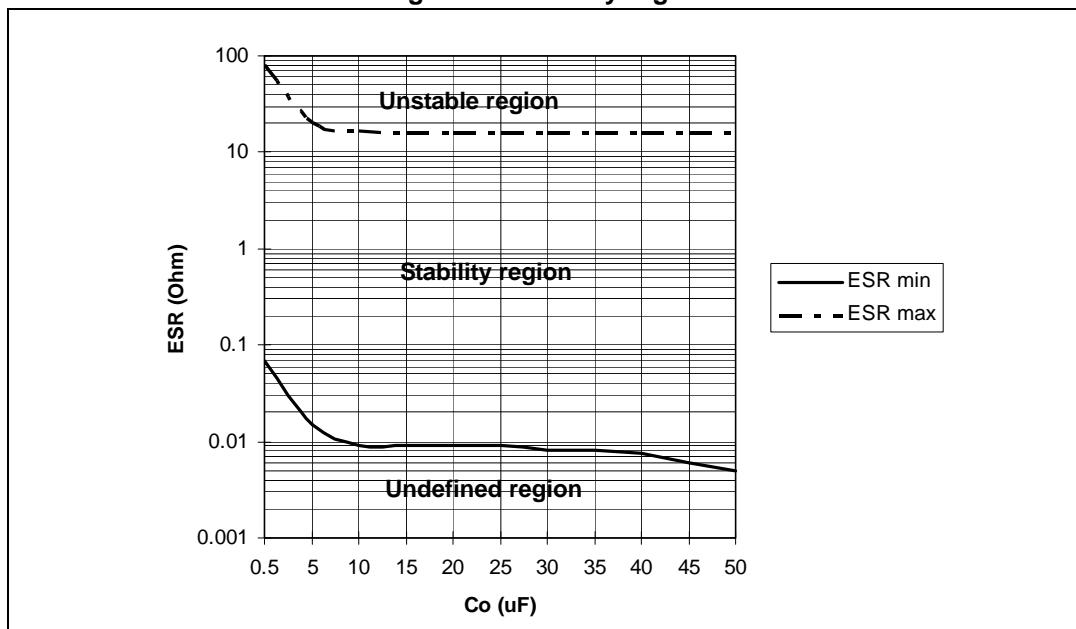

Figure 26. L4995 application schematic

Note:

The input capacitor  $C_s > 200\text{nF}$  is necessary for the smoothing of line disturbances. The output capacitor  $C_{o1} > 100\text{nF}$  is necessary for the stability of the regulation loop. In order to dampen output voltage oscillations during high load current surges, it is recommended an additional electrolytic capacitor  $C_{o2} > 10\mu\text{F}$  to be placed at the output pin.

Figure 27. Stability region

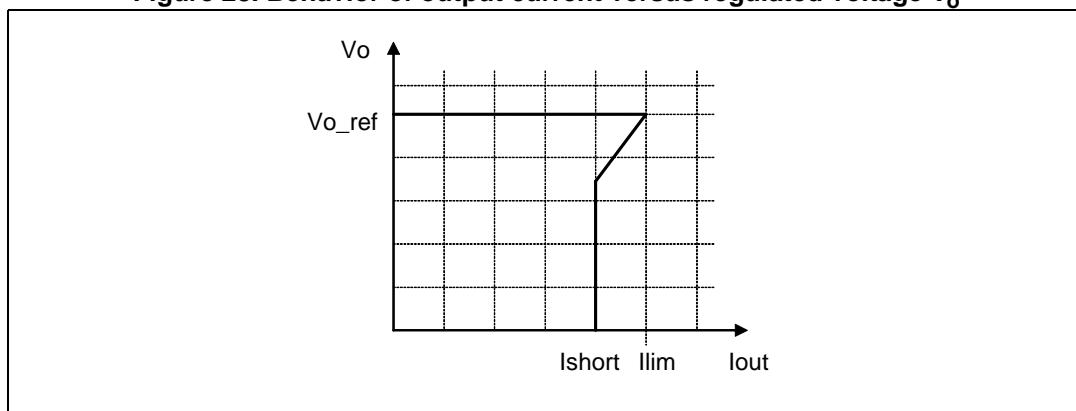

**Note:** The curve which describes the minimum ESR is derived from characterization data on the regulator with connected ceramic capacitors which feature low ESR values (at 100 kHz). Any capacitor with further lower ESR than the given plot value must be evaluated in each and every case.

### 3.1 Voltage regulator

Voltage regulator uses a p-channel transistor as a regulating element. With this structure, very low dropout voltage at current up to 500mA is obtained. The output voltage is regulated up to transient input supply voltage of 40V. No functional interruption due to over-voltage pulses is generated. A short circuit protection to GND is provided.

The voltage regulator is active when  $E_n$  is high.

**Figure 28. Behavior of output current versus regulated voltage  $V_o$**

### 3.2 Reset

The reset circuit supervises the output voltage  $V_o$ . The  $V_{o\_th}$  reset threshold is defined with the internal reference voltage and a resistor output divider. If the output voltage becomes lower than  $V_{o\_th}$  then  $R_{es}$  goes low with a reaction time  $t_{rr}$ . The reset low signal is guaranteed for an output voltage  $V_o$  greater than 1V.

When the output voltage becomes higher than  $V_{o\_th}$  then  $R_{es}$  goes high with a delay  $t_{rd}$ . This delay is obtained by an internal oscillator.

The oscillator period is given by:

**Equation 1**

$$T_{osc} = [(V_{Rhth} - V_{Rlth}) \times C_{tr}] / I_{cr} + [(V_{Rhth} - V_{Rlth}) \times C_{tr}] / I_{dr}$$

where:

$I_{cr}$ :is an internally generated charge current

$I_{dr}$ :is an internally generated discharge current

$V_{Rhth}$ ,  $V_{Rlth}$ :are two voltages defined with the output voltage and a resistor output divider

$C_{tr}$ :is an external capacitance.

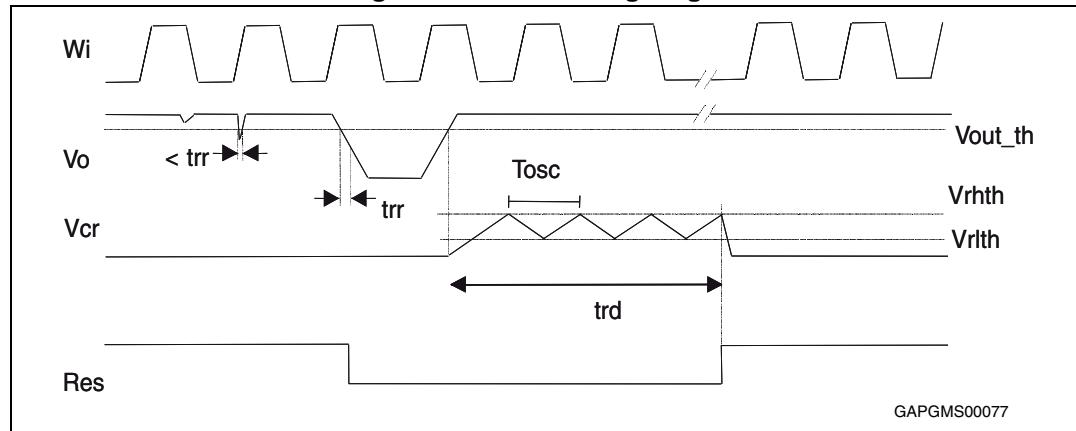

$t_{rd}$  is given by:

### Equation 2

$$t_{rd} = (V_{Rhth} \times C_{tr})/I_{cr} + 3 \times T_{osc}$$

Reset is active when  $E_n$  is high.

Figure 29. Reset timing diagram

GAPGMS00077

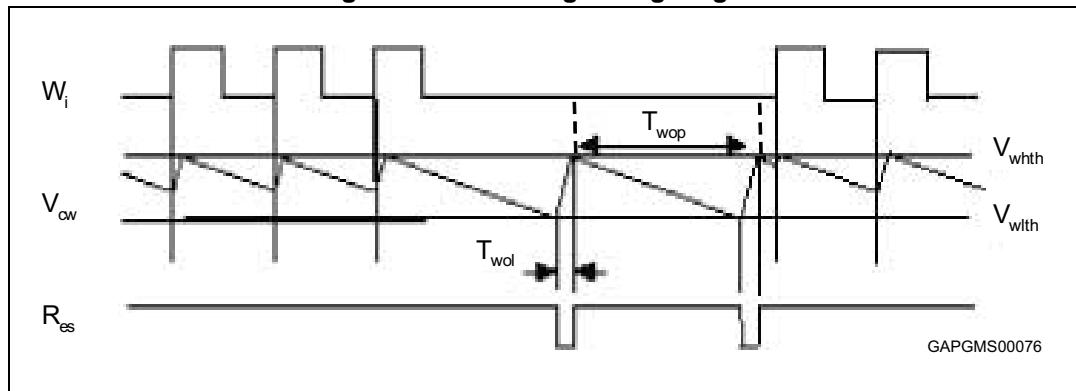

### 3.3 Watchdog

A connected microcontroller is monitored by the watchdog input  $W_i$ . If pulses are missing, the Reset output pin is set to low. The pulse sequence time can be set within a wide range with the external capacitor,  $C_{tw}$ . The watchdog circuit discharges the capacitor  $C_{tw}$ , with the constant current  $I_{ cwd}$ . If the lower threshold  $V_{wlth}$  is reached, a watchdog reset is generated. To prevent this the microcontroller must generate a positive edge during the discharge of the capacitor before the voltage has reached the threshold  $V_{wlth}$ . In order to calculate the minimum time  $t$ , during which the micro-controller must output the positive edge, the following equation can be used:

### Equation 3

$$(V_{whth} - V_{wlth}) \times C_{tw} = I_{ cwd} \times t$$

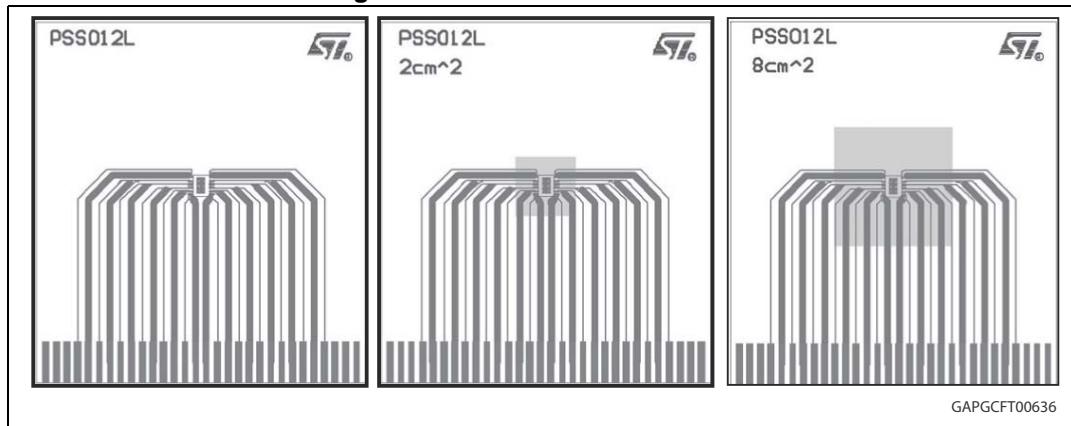

Every  $W_i$  positive edge switches the current source from discharging to charging. The same happens when the lower threshold is reached. When the voltage reaches the upper threshold,  $V_{whth}$ , the current switches from charging to discharging. The result is a saw-tooth voltage at the watchdog timer capacitor  $C_{tw}$ .

**Figure 30. Watchdog timing diagram**

## 4 Package and PCB thermal data

1. No intrusion allowed inwards the leads.
2. Flash or bleeds on exposed die pad shall not exceed 0.4 mm per side
3. "D and E" do not include mold Flash or protusions.  
Mold Flash or protusions shall not exceed 0.15 mm.
4. Variations for small window leadframe option.

## 6 Revision history

Table 13. Document revision history

| Date        | Revision | Changes   |
|-------------|----------|---|
| 26-May-2006 | 1        | Initial release.  |
| 05-Jan-2007 | 2        | L4995A and L4995R versions added:<br><i>Features</i> section updated and table added.<br><i>Table 1</i> updated.<br><i>Table 5: General</i> , Watchdog Iwi entry updated.<br><i>Figure 2: Block diagram of L4995A</i> and <i>Figure 3: Block diagram of L4995R</i> added.<br><i>Table 2: Pins descriptions</i> updated.<br><i>Table 4: Thermal data</i> updated.<br><i>List of tables</i> and <i>List of figures</i> added.<br>Packaging information provided in new format.<br><i>Table 11: PowerSSO-12 mechanical data</i> X and Y values updated.<br>Some sections reformatted for clarity.<br>New disclaimer added. |
| 18-May-2007 | 3        | Updated <i>Table 2: Pins descriptions</i> .<br>Updated <i>Figure 4: Pins configurations (L4995)</i> .<br><i>Table 1: Device summary</i> changed title.  |
| 09-Jul-2007 | 4        | Updated <i>Table 2: Pins descriptions</i> .   |
| 09-Aug-2007 | 5        | Updated <i>Table 2: Pins descriptions</i> .<br>Updated <i>Table 12: PowerSSO-24 mechanical data</i> .   |

**Table 13. Document revision history (continued)**

| Date        | Revision | Changes   |
|-------------|----------|---|
| 07-Dec-2007 | 6        | <p>Updated <a href="#">Section 2.2: Thermal data</a>:</p> <ul style="list-style-type: none"> <li>– corrected note changing single layer with double layer.</li> </ul> <p>Updated <a href="#">Table 5: General</a>:</p> <ul style="list-style-type: none"> <li>– changed <math>I_{short}</math> typ. value from 750 to 800 mA</li> <li>– added <math>I_{short}</math> max. value</li> <li>– changed <math>I_{lim}</math> typ. value from 820 to 900 mA</li> <li>– added <math>I_{lim}</math> max. value</li> <li>– added <math>I_{lim}</math> note</li> <li>– added <math>V_{dp}</math> note</li> <li>– changed <math>I_{qn\_1}</math> typ. value from 110 to 90 <math>\mu</math>A</li> <li>– added <math>I_{qn\_1}</math> max. value</li> <li>– added <math>I_{qn\_50}</math> max. value</li> <li>– added <math>I_{qn\_150}</math> max. value</li> <li>– changed <math>I_{qn\_250}</math> typ. value from 1.2 to 1 mA</li> <li>– added <math>I_{qn\_250}</math> max. value</li> <li>– changed <math>I_{qn\_500}</math> typ. value from 2.4 to 2.1 mA</li> <li>– added <math>I_{qn\_500}</math> max. value</li> </ul> <p>Updated <a href="#">Table 6: Reset</a>:</p> <ul style="list-style-type: none"> <li>– changed <math>V_{Rlth}</math> parameter definition from “Reset timing low” to “Reset delay circuit low threshold”</li> <li>– changed <math>V_{Rhth}</math> parameter definition from “Reset timing high” to “Reset delay circuit high threshold”</li> <li>– added <math>T_{rd}</math> min. and max. values</li> </ul> <p>Updated <a href="#">Table 7: Watchdog</a>:</p> <ul style="list-style-type: none"> <li>– added <math>I_{wi}</math> max value</li> </ul> <p>Updated <a href="#">Table 8: Enable</a>:</p> <ul style="list-style-type: none"> <li>– changed Pull down current symbol from <math>R_{En}</math> to <math>I_{En}</math></li> <li>– changed <math>I_{En}</math> typ. value from 2.5 to 10 <math>\mu</math>A</li> <li>– added <math>I_{En}</math> max. value</li> </ul> <p>Added <a href="#">Section 2.4: Electrical characteristics curves</a>.</p> <p>Added <a href="#">Section 2.5: Test circuit and waveforms plot</a>.</p> <p>Added <a href="#">Section 4: Package and PCB thermal data</a></p> |
| 03-Oct-2008 | 7        | <p>Updated PowerSSO-24 information:</p> <ul style="list-style-type: none"> <li>– changed <a href="#">Figure 40: PowerSSO-24 package dimensions</a></li> <li>– changed <a href="#">Table 12: PowerSSO-24 mechanical data</a>.</li> </ul>   |
| 19-Mar-2009 | 8        | Updated <a href="#">Table 4: Thermal data</a>   |
| 19-May-2009 | 9        | <p>Updated <a href="#">Table 2: Pins descriptions</a>.</p> <p>Updated <a href="#">Figure 4: Pins configurations (L4995)</a></p> <ul style="list-style-type: none"> <li>– Changed GND to substrate</li> </ul>  |

**Table 13. Document revision history (continued)**

| Date        | Revision | Changes  |
|-------------|----------|--|
| 24-Jun-2009 | 10       | <i>Table 12: PowerSSO-24 mechanical data:</i><br>– Deleted A (min) value<br>– Changed A (max) value from 2.50 to 2.45<br>– Changed A2 (max) value from 2.40 to 2.35<br>– Updated K row<br>– Changed L (min) value from 0.6 to 0.55<br>– Changed L (max) value from 1 to 0.85 |
| 12-Jul-2010 | 11       | Added <i>Figure 27: Stability region.</i>  |
| 09-Mar-2012 | 12       | Added footnote in <i>Table 3: Absolute maximum ratings.</i>  |
| 17-Oct-2012 | 13       | <i>Table 6: Reset.</i><br>– $T_{rd}$ : updated min, typ and max values   |
| 20-Sep-2013 | 14       | Updated disclaimer.  |
| 17-Sep-2018 | 15       | Updated title and <i>Features.</i><br>Minor text changes.  |
