### DESCRIPTION

The M74HC4053 is a triple two-channel analog MULTIPLEXER/DEMULITPLEXER fabricated with silicon gate C<sup>2</sup>MOS technology and it is pin to pin compatible with the equivalent metal gate CMOS4000B series.

It contains 6 bidirectional and digitally controlled analog switches.

A built-in level shifting is included to allow an input range up to  $\pm 6V$  (peak) for an analog signal with digital control signal of 0 to 6V.

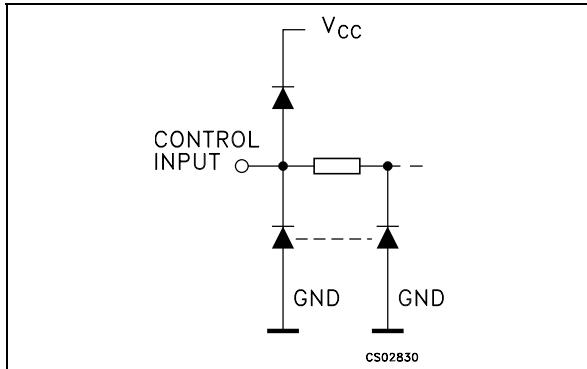

$V_{EE}$  supply pin is provided for analog input signals. It has an inhibit (INH) input terminal to disable all the switches when high. For operation as a digital multiplexer/demultiplexer,  $VEE$  is connected to GND.

A, B and C control inputs select one of a pair of channels.

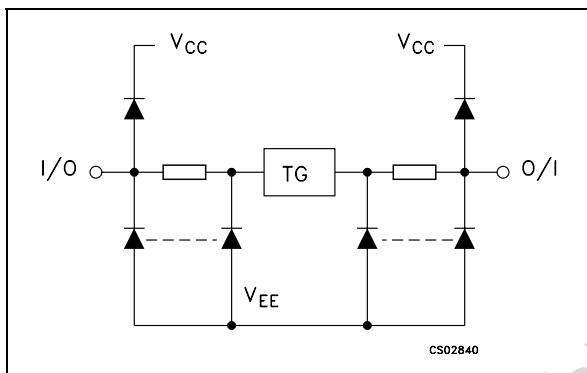

All inputs are equipped with protection circuits against static discharge and transient excess voltage.
