Notes:

(1) Intrinsic standoff ratio,
 η , is defined by equation:

$$\eta = \frac{V_p - V_F}{V_{B2B1}}$$

Where V_p = Peak Point Emitter Voltage

V_{B2B1} = Interbase Voltage

V_F = Emitter to Base-One Junction Diode Drop

($\approx 0.45 \text{ V}$ @ $10 \mu\text{A}$)

(2) Use pulse techniques: $PW \approx 300 \mu\text{s}$, duty cycle $\leq 2\%$ to avoid internal heating due to interbase modulation which may result in erroneous readings.

(3) Base-One Peak Pulse Voltage is measured in circuit of Figure 3. This specification is used to ensure minimum pulse amplitude for applications in SCR firing circuits and other types of pulse circuits.
