General Description

The HMC936ALP6E is a 6-bit digital phase shifter which is rated from 1.2 to 1.4 GHz, providing 360 degrees of phase coverage, with a LSB of 5.625 degrees. The HMC936ALP6E features very low RMS phase error of 1.2 degrees and extremely low inser-tion loss variation of ±0.5 dB across all phase states. This high accuracy phase shifter is controlled with positive control logic of 0/+5V and requires no negative supply voltage. The HMC936ALP6E is housed in a compact 6x6 mm plastic leadless SMT package and is internally matched to 50 Ohms with no external components.

[3] Please refer to part's pin description and functional diagram for pin out assignments on evaluation board.

The circuit board used in the application should use RF circuit design techniques. Signal lines should have 50 ohm impedance while the package ground leads and exposed paddle should be connected directly to the ground plane similar to that shown. A sufficient number of via holes should be used to connect the top and bottom ground planes. The evaluation board should be mounted to an appropriate heat sink. The evaluation circuit board shown is available from Analog Devices upon request.
