1. General Specifications

Operating Temp.

: min. 0°C ~ max. 50°C

Storage Temp.

: min. -20°C ~ max. 70°C

Display Format

: 16 characters × 2 lines

Display Fonts

: 5 x 7 dots + cursor (1 character)

Viewing Area

: 99.0 (W) × 24.0 (H) mm

Outline Dimensions : 122.0 (W) \times 44.0 (H) \times 14.6 max. (D) mm

Weight

: 75g max.

LCD Type

: NTD-7136

(STN / Yellow-mode / Transmissive)

Viewing Angle

: 12:00

Backlight

: LED Backlight / Yellow-green

Drawings

: Dimensional Outline UE-31362B

Response	Rise Note 2	Ton	_	-	140	210	ms
Time	Decay Note 3	Toff	. -	-	180	270	ms

Note 1 : Contrast ratio is definded as follows.

CR = LOFF / LON

Lon: Luminance of the ON segments Loff: Luminance of the OFF segments

Note 2 :The time that the luminance level reaches 90% of the saturation level from 0% when ON signal is applied.

Note 3 :The time that the luminance level reaches 10% of the saturation level from 100% when OFF signal is applied.

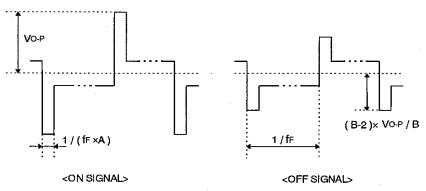

Note 4 : Definition of Driving Voltage VD

Assuming that the typical driving waveforms shown below are applied to the LCD Panel at 1/A Duty - 1/B Bias (A : Duty Number, B : Bias Number). Driving voltage V_D is definded as follows.

 $V_D = (Vth1+Vth2) / 2$

Vth1: The voltage Vo-P that should provide 50% of the saturation level in the luminance at the segment which the ON signal is applied to.

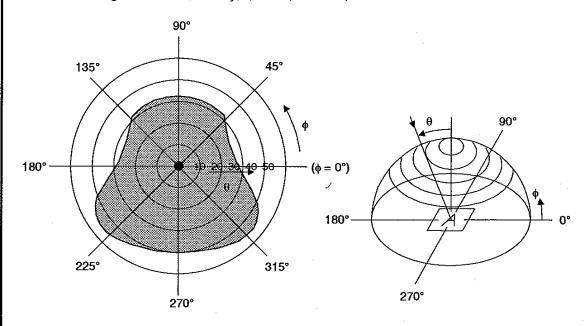

Vth2: The voltage Vo-P that should provide 50% of the saturation level in the luminance at the segment which the OFF signal is applied to.

3.3. Definition of Viewing Angle and Optimum Viewing Area

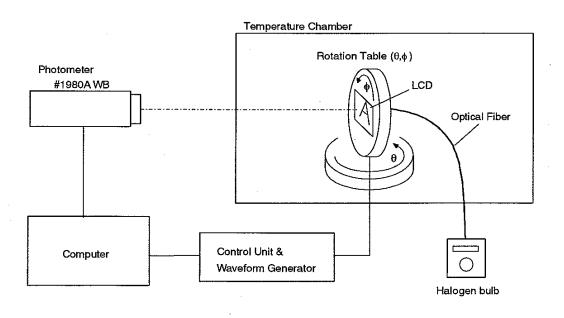

*Point • shows the point where contrast ratio is measured. : θ = 0°, ϕ = -°

*Driving condition: 1/16 Duty, 1/5 Bias, VD=4.7V, fF=84.4Hz

*Area shows typ. CR≥2

4.2. Example of Power Supply

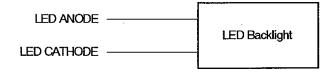

It is recommended to apply a potentiometer for the contrast adjust due to the tolerance of the driving voltage and its temperature dependence.

5.Test

No change on display and in operation under the following test condition.

Conditions: Unless otherwise specified, tests will be conducted under the following condition.

Temperature: 20±5°C Humidity: 65±5%RH

tests will be not conducted under functioning state.

No.	Parameter	Conditions	Notes
1	High Temperature Operating	50°C±2°C, 96hrs (operation state)	
2	Low Temperature Operating	0°C±2°C, 96hrs (operation state)	1
3	High Temperature Storage	70°C±2°C, 96hrs	2
4	Low Temperature Storage	-20°C±2°C, 96hrs	1,2
5	Damp Proof Test	40°C±2°C,90~95%RH, 96hrs	1,2
6	Vibration Test	Total fixed amplitude : 1.5mm	3
		Vibration Frequency : 10~55Hz	
		One cycle 60 seconds to 3 directions of X, Y, Z	
		each 15 minutes	:
7	Shock Test	To be measured after dropping from 60cm high	
		the concrete surface in packing state.	
		Dropping method comer dropping A corner : once Edge dropping B,C,D edge : once Face dropping E,F,G face : once	

Note 1:

No dew condensation to be observed.

Note 2:

The function test shall be conducted after 4 hours storage at the normal

Temperature and humidity after removed from the test chamber.

Note 3:

Vibration test will be conducted to the product itself without putting it in a

container.

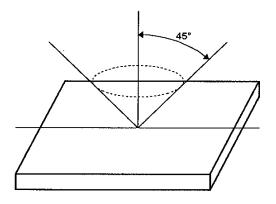

6.Appearance Standards

6.1.Inspection conditions

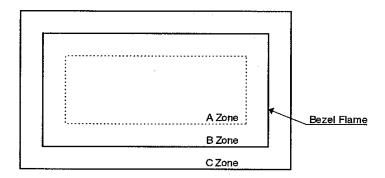

The LCD shall be inspected under 40W white fluorescent light.

The distance between the eyes and the sample shall be more than 30cm.

All directions for inspecting the sample should be within 45° against perpendicular line.

6.2. Definition of applicable Zones

A Zone: Active display area

B Zone: Area from outside of "A Zone" to validity viewing area

C Zone: Rest parts

A Zone + B Zone = Validity viewing area

7.Code System of Production Lot

The production lot of module is specified as follows.

8.Type Number

The type number of module is specified on the back of module as follows.

9. Applying Precautions

Please contact us when questions and/or new problems not specified in this specifications arise.

10. Precautions Relating Product Handling

The Following precautions will guide you in handling our product correctly.

- 1) Liquid crystal display devices
 - The liquid crystal display device panel used in the liquid crystal display module is made of plate glass. Avoid any strong mechanical shock. Should the glass break handle it with care
- 2. The polarizer adhering to the surface of the LCD is made of a soft material. Guard against scratching it.
- 2) Care of the liquid crystal display module against static electricity discharge.
 - When working with the module, be sure to ground your body and any electrical equipment you may be using. We strongly recommend the use of anti static mats (made of rubber), to protect work tables against the hazards of electrical shock.
- 2. Avoid the use of work clothing made of synthetic fibers. We recommend cotton clothing or other conductivity-treated fibers.
- 3. Slowly and carefully remove the protective film from the LCD module, since this operation can generate static electricity.
- 3) When the LCD module alone must be stored for long periods of time:
 - 1. Protect the modules from high temperature and humidity.
 - 2. Keep the modules out of direct sunlight or direct exposure to ultraviolet rays.
 - 3. Protect the modules from excessive external forces.
- 4) Use the module with a power supply that is equipped with an overcurrent protector circuit, since the module is not provided with this protective feature.
- 5) Do not ingest the LCD fluid itself should it leak out of a damaged LCD module. Should hands or clothing come in contact with LCD fluid, wash immediately with soap.
- 6) Conductivity is not guaranteed for models that use metal holders where solder connections between the metal holder and the PCB are not used. Please contact us to discuss appropriate ways to assure conductivity.
- 7) For models which use CFL:
 - High voltage of 1000V or greater is applied to the CFL cable connector area.
 Care should be taken not to touch connection areas to avoid burns.
 - 2. Protect CFL cables from rubbing against the unit and thus causing the wire jacket to become worn.
 - 3. The use of CFLs for extended periods of time at low temperatures will significantly shorten their service life.
- 8) For models which use touch panels:
 - 1.Do not stack up modules since they can be damaged by components on neighboring modules.
- 2.Do not place heavy objects on top of the product. This could cause glass breakage.
- For models which use COG, TAB, or COF:
 - 1. The mechanical strength of the product is low since the IC chip faces out unprotected from the rear.
 - Be sure to protect the rear of the IC chip from external forces.
- 2.Given the fact that the rear of the IC chip is left exposed, in order to protect the unit from electrical damage, avoid installation configurations in which the rear of the IC chip runs the risk of making any electrical contact.

- 10) Models which use flexible cable, heat seal, or TAB:
 - 1.In order to maintain reliability, do not touch or hold by the connector area.
- 2. Avoid any bending, pulling, or other excessive force, which can result in broken connections.

11.Warranty

This product has been manufactured to your company's specifications as a part for use in your company's general electronic products. It is guaranteed to perform according to delivery specifications. For any other use apart from general electronic equipment, we cannot take responsibility if the product is used in medical devices, nuclear power control equipment, aerospace equipment, fire and security systems, or any other applications in which there is a direct risk to human life and where extremely high levels of reliability are required. If the product is to be used in any of the above applications, we will need to enter into a separate product liability agreement.

- We cannot accept responsibility for any defect, which may arise from additional manufacturing of the product (including disassembly and reassembly), after product delivery.
- We cannot accept responsibility for any defect, which may arise after the application of strong external force to the product.
- We cannot accept responsibility for any defect, which may arise due to the application of static electricity after the product has passed your company's acceptance inspection procedures.
- 4. When the product is in CFL models, CFL service life and brightness will vary according to the performance of the inverter used, leaks, etc. We cannot accept responsibility for product performance, reliability, or defect, which may arise.
- 5. We cannot accept responsibility for intellectual property of a third party, which may arise through the application of our product to your assembly with exception to those issues relating directly to the structure or method of manufacturing of our product.
- 6. Optrex will not be held responsible for any quality guarantee issue for defect products judged as Optrex-origin longer than 2 (two) years from Optrex production or 1 (one) year from Optrex, Optrex America, Optrex Europe, Display LC delivery which ever comes later.
