RFbeam Microwave GmbH

K-LC2 RADAR TRANSCEIVER

Datasheet

Features

- 24 GHz K-band miniature I/Q transceiver
- 140MHz sweep FM input
- 2 x 4 patch antenna
- Excellent noise cancelling ability though I/Q technology
- Beam aperture 80°/34°
- 15dBm EIRP output power
- 25x25mm² surface, <6.5mm thickness
- Lowcost design

Applications

- Direction sensitive movement detectors
- Security systems
- Object speed measurement systems
- Simple ranging detection using FSK
- Industrial sensors

Description

K-LC2 is a 2 x 4 patch Doppler module with an asymmetrical beam for lowcost short distance applications. Its typical applications are movement sensors in the security and presence detection domain.

In building automation this module may be an alternative for infrared PIR or AIR systems thanks to its outstanding performance/cost ratio.

The module is extremely small and lightweight. With its wide IF bandwidth it opens many new applications. FSK is possible thanks to the unique RFbeam oscillator design. This allows to use this lowcost module even in ranging applications.

Powerful starterkits (ST100 and ST200) with signal conditioning and visualization on the PC's are available.

Connector	2.54mm spacing			5		pins
ESD Rating						
Electrostatic Discharge	Human body model class 0	V _{ESD}			250	V

Note 1 The VCO input has an internal voltage source with approx. 0.9VDC. For driving this pin it is necessary to source and sink current Note 2 Transmit frequency stays within 24.050 to 24.250GHz over the specified temperature range when the VCO pin is left open

Note 3 Theoretical value, given by Design

Antenna System Diagram

This diagram shows module sensitivity in both azimuth and elevation directions. It incorporates therefore the transmitter and receiver antenna characteristics.

Horizontal 80°, vertical 34° at IF output voltage -6dB (corresponds to -3dB TX power)

Remarks: The broader the antenna, the narrower the beam.

Fig. 2: System diagram

Datasheet

FM Characteristics

VCO Voltage generates an output signal even without an object in range because of the finite isolation between transmitter and receiver path. This effect is called self-mixing and leads to a DC signal that depends on the carrier frequency. Mixer offset voltages are also dependent on production tolerances.

Pin Configuration

Pin	Description	Typical Value	
1	IF Q output	load 1kOhm	
2	VCC	DC supply	
3	IF I output	load 1kOhm	
4	GND	ground	
5	VCO in	Open = f _{TX}	

Outline Dimensions

All Dimensions in mm; values are typical unless otherwise specified

Application Notes

Sensitivity and Maximum Range

The values indicated here are intended to give you a 'feeling' of the attainable detection range with this module. It is not possible to define an exact RCS (radar cross section) value of real objects because reflectivity depends on many parameters. The RCS variations however influence the maximum range only by $\sqrt[4]{\sigma}$.

Maximum range for Doppler movement depends mainly on:

- Module sensitivityS:
- -111dBc (@0.5kHz IF Bandwidth)
 f_{Tx} :-111dBc (@0.5kHz IF Bandwidth)
24.125GHz- Radar cross section RCS ("reflectivity") of the object σ^{1} :1m² approx. for a moving person

>50m² for a moving car

note ¹⁾ RCS indications are very inaccurate and may vary by factors of 10 and more.

The famous "Radar Equation" may be reduced for our K-band module to the following relation:

 $r = 0.0167 \cdot 10^{\frac{-s}{40}} \cdot \sqrt[4]{\sigma}$

Using this formula, you get an indicative detection range of

- >10 meters for a moving person.

- >26m meters for a moving car

Please note, that range values also highly depend on the performance of signal processing, environment conditions (i.e. rain, fog), housing of the module and other factors.

For simple detection purposes (security applications e.g.) without the need of speed measurements, range may be enhanced by further reducing the IF bandwidth. With 250Hz bandwidth and a simple comparator, we get already a 20m detection range.

Ordering Information

Ordering number	# of Pins	FM input	Supply voltage
K-LC2	5	yes	5V

Datasheet Revision History

Version	Date	Changes
1.0	Aug-2008	Preliminary release
1.1	Oct-2008	Replaced diagram FM characteristics
1.2	Apr-2009	Replaced Fig. 4. Changes dual 4 patch to single 4 patch antenna
1.3	May-2009	Fig. 1 changed blockdiagram
1.4	June-2009	Updated System diagram
1.5	May-2011	Cosmetic text correction
1.6	April-2014	Fig. 2 System diagram comments added
2.0	July-2014	New antenna design starting from production lot 1421. Better sensitivity.
2.1	Aug-2018	Changed footer to new address
2.2	Mar-2020	Added ESD information, changed operating temperature and spurious, added ordering informations
