ABSOLUTE RATINGS (limiting values) (0°C ≤ Tamb ≤ 70°C)

Symbol	Parameter	Value	Unit	
I _{PP}	Peak pulse current for 8/20 μsexponential pulse	See note	40	A
I ² t	Wire I ² t value	See note	0.6	A ² s

Note:

For surges greater than the maximum value specified, the input/output will present first a short circuit to the common bus line and after an open circuit caused by the wire.

INSTRUCTION GUIDE

This monolithic Transil Array is based on 6 Unidirectional Transils with a common cathode and can be configured to offer 4 or 5 bidirectional functions, according to the following customer application.

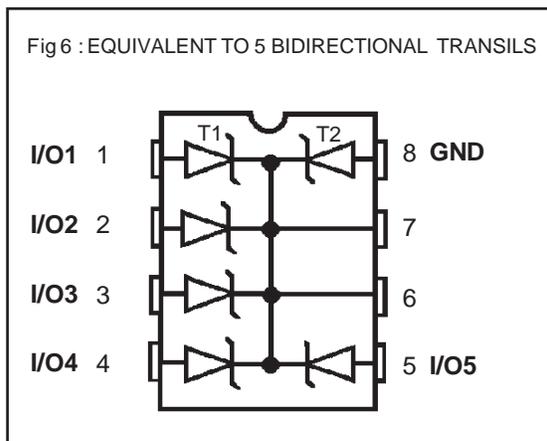

UTILIZATION AS A BIDIRECTIONAL TRANSIL ARRAY WITH 4 I/Os.

The main application of this device is to be configured as a 4, bidirectional Transil Array as per the Pin-out of Fig 5.

Pins 5 and 8 are connected to ground.
INPUTS/OUTPUTS are from Pin 1 to Pin 4.

Note : The bidirectional function is made with 2 unidirectional Transils. One (T1) is connected to the INPUT/OUTPUT, the other one (T2) is connected to the ground (see Fig 5).

Ground is connected via 2 diodes T2 and T3 .
This allows to withstand 2 specified surges on 2 different lines at the same time.

UTILIZATION AS A BIDIRECTIONAL TRANSIL ARRAY WITH 5 I/Os.

The ITAxxC1 can be used as a 5 bidirectional Transil Array.

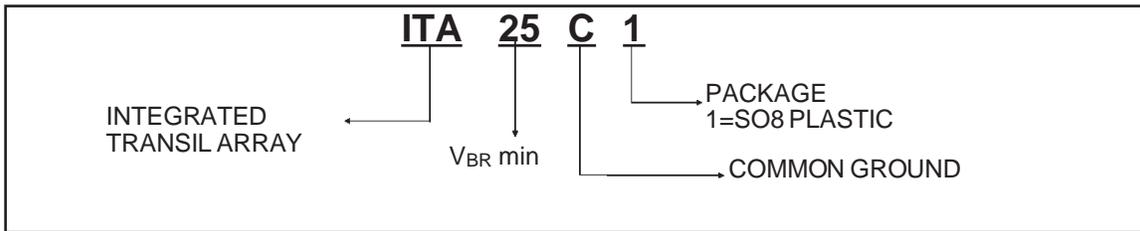

Ground can be connected to any pin (except 6 and 7).

The other pins are used as INPUTS and OUTPUTS.

The bidirectional function is made with 2 unidirectional Transils T1 and T2. One example with ground on Pin 8 is shown in Fig 6.

This configuration allows to withstand only one specified surge at the same time.
