**Date: October 22, 2018**  
**To: Bussmann series UL high SCCR DIN-Rail surge protective device customers**  
**Subject: End-of-life and supersession notice**

Dear valued customer:

Effective immediately, the Bussmann™ series line of black label high SCCR DIN-Rail surge protective devices and replacement modules have been superseded to comply with UL 1449 4<sup>th</sup> Edition standards and to offer better ratings.

This upgrade necessitates obsoleting existing catalog numbers that are shown in the table on the next page along with their new, direct replacement catalog numbers.

In implementing this upgrade, we have also reduced the line's SKU complexity to be more aligned with market demand. As such, certain system configurations and voltages are no longer available.

Along with this line upgrade, remote contact signaling is now standard on all black label units, making that feature always available to customers for use after installation.

Existing stock is saleable product and should not be returned.

The discontinued/superseded catalog numbers will remain active and available for order until February 28, 2019 or until inventory is depleted. Note: new and obsoleted replacement modules are not interchangeable.

Should you need technical assistance identifying the optimal surge protective device for your application, please contact our Application Engineering team at 1-855-278-7626, or email [FuseTech@Eaton.com](mailto:FuseTech@Eaton.com).

If you have any questions regarding this end-of-life and supersession notice, please contact your local Bussmann series product sales representative.

Best Regards,

**Ali Abdulhay**
