# 2.5V 1:5 Dual Differential LVDS Compatible Clock Driver

### Description

The MC100EP210S is a low skew 1-to-5 dual differential driver, designed with LVDS clock distribution in mind. The LVDS or LVPECL input signals are differential and the signal is fanned out to five identical differential LVDS outputs.

The EP210S specifically guarantees low output-to-output skew. Optimal design, layout, and processing minimize skew within a device and from device to device.

Two internal 50  $\Omega$  resistors are provided across the inputs. For LVDS inputs, VTA and VTB pins should be unconnected. For LVPECL inputs, VTA and VTB pins should be connected to the  $V_{TT}$  ( $V_{CC}$  – 2.0 V) supply.

Designers can take advantage of the EP210S performance to distribute low skew LVDS clocks across the backplane or the board.

#### **Features**

- 20 ps Typical Output-to-Output Skew
- 85 ps Typical Device-to-Device Skew
- 550 ps Typical Propagation Delay
- The 100 Series Contains Temperature Compensation
- Maximum Frequency > 1 GHz Typical
- Operating Range:  $V_{CC} = 2.375 \text{ V}$  to 2.625 V with  $V_{EE} = 0 \text{ V}$
- Internal 50 Ω Input Termination Resistors
- LVDS Input/Output Compatible
- These are Pb-Free Devices

#### ORDERING INFORMATION

See detailed ordering and shipping information in the package dimensions section on page 6 of this data sheet.

<sup>\*</sup>For additional marking information, refer to Application Note AND8002/D.

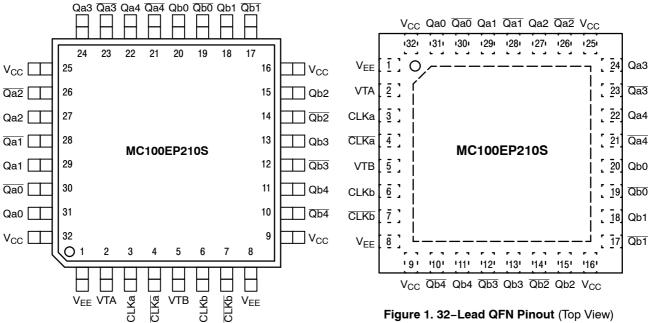

Figure 1. 32-Lead QFN Pinout (Top View)

Warning: All  $V_{\mbox{\footnotesize CC}}$  and  $V_{\mbox{\footnotesize EE}}$  pins must be externally connected to Power Supply to guarantee proper operation.

Figure 1. 32-Lead LQFP Pinout (Top View)

**Table 1. PIN DESCRIPTION** 

| PIN                    | FUNCTION   |
|------------------------|--|
| CLKn, CLKn             | LVDS, LVPECL CLK Inputs*   |
| Qn0:4, Qn0:4           | LVDS Outputs   |
| VTA                    | 50 $\Omega$ Termination Resistors  |
| VTB                    | 50 $\Omega$ Termination Resistors  |
| V <sub>CC</sub>        | Positive Supply  |
| V <sub>EE</sub>        | Ground   |
| EP for QFN-32,<br>only | The Exposed Pad (EP) on the QFN-32 package bottom is thermally connected to the die for improved heat transfer out of package. The exposed pad must be attached to a heat–sinking conduit. The pad is electrically connected to VEE. |

<sup>\*</sup>Under open or floating conditions with input pins converging to a common termination bias voltage the device is susceptible to auto oscillation.

NOTE: Device will meet the specifications after thermal equilibrium has been established when mounted in a test socket or printed circuit board with maintained transverse airflow greater than 500 lfpm. Electrical parameters are guaranteed only over the declared operating temperature range. Functional operation of the device exceeding these conditions is not implied. Device specification limit values are applied individually under normal operating conditions and not valid simultaneously.

- 2. Input and output parameters vary 1:1 with V<sub>CC</sub>.
- 3. All loading with 100  $\Omega$  across LVDS differential outputs.
- 4. V<sub>IHCMR</sub> min varies 1:1 with V<sub>EE</sub>, V<sub>IHCMR</sub> max varies 1:1 with V<sub>CC</sub>. The V<sub>IHCMR</sub> range is referenced to the most positive side of the differential input signal.
