NTE1910 Integrated Circuit Positive 3 Terminal Voltage Regulator, 9V, 1A

Description:

The NTE1910 is a 3 terminal fixed positive voltage regulator in a TO220 type package. Stabilized fixed output voltage is obtained from unstaibe DC input voltage without the use of external components.

Features:

- No External Components
- Output Current in Excess of 1A
- Internal Short-Circuit Current Limiting
- Internal Thermal Overload Protection
- Output Transistor Safe Area Compensation

Note 1. The specified condition, $T_J = +25^\circ\text{C}$, means that the test should be carried out with the test time so short (within 10ms) that the drift in characteristic value due to the rise in chip junction temperature can be ignored.

Note 2. When not specified, $V_I = 15\text{V}$, $I_O = 500\text{mA}$, $C_I = 0.33\mu\text{f}$, and $C_O = 0.1\mu\text{f}$.
