For further information on technology, delivery terms and conditions and prices, please contact the nearest Infineon Technologies Office ([www.infineon.com](http://www.infineon.com)).

#### **Warnings**

Due to technical requirements, components may contain dangerous substances. For information on the types in question, please contact the nearest Infineon Technologies Office.

Infineon Technologies components may be used in life-support devices or systems only with the express written approval of Infineon Technologies, if a failure of such components can reasonably be expected to cause the failure of that life-support device or system or to affect the safety or effectiveness of that device or system. Life support devices or systems are intended to be implanted in the human body or to support and/or maintain and sustain and/or protect human life. If they fail, it is reasonable to assume that the health of the user or other persons may be endangered.

## 1 Features

Main features:

- Low insertion loss
- High port-to-port-isolation
- Low harmonic generation
- On-chip control logic, only one control line required
- High ESD robustness
- No external components required
- General purpose switch for applications up to 3 GHz
- Small leadless package TSLP-7-6
- Lead and halogen free package (RoHS and WEEE compliant)

## Description

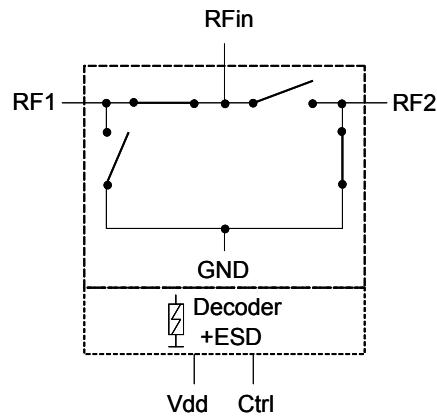

The BGS12AL7-6 General Purpose RF MOS switch is designed to cover a broad range of applications from 30 MHz to 3 GHz. The symmetric design of its single pole double throw configuration, as shown in [Figure 1](#) offers high design flexibility. This single supply chip integrates on-chip CMOS logic driven by a simple, single-pin CMOS or TTL compatible control input signal. The 0.1 dB compression point exceeds the switch's maximum input power level of 21 dBm, resulting in linear performance at all signal levels. The RF switch has a very low insertion loss of 0.4 dB in the 1 GHz and 0.5 dB in the 2 GHz range.

Unlike GaAs technology, external DC blocking capacitors at the RF ports are only required if DC voltage is applied externally.

Product Name	Package	Chip	Marking
BGS12AL7-6	TSLP7-6	M4781	12

## Features

The BGS12AL7-6 RF switch is manufactured in Infineon's patented MOS technology, offering the performance of GaAs with the economy and integration of conventional CMOS including the inherent higher ESD robustness.

**Attention: Stresses above the max. values listed here may cause permanent damage to the device.**

**Exposure to absolute maximum rating conditions for extended periods may affect device reliability. Maximum ratings are absolute ratings; exceeding only one of these values may cause irreversible damage to the integrated circuit.**

## 4 Electrical Specifications

Test Conditions:

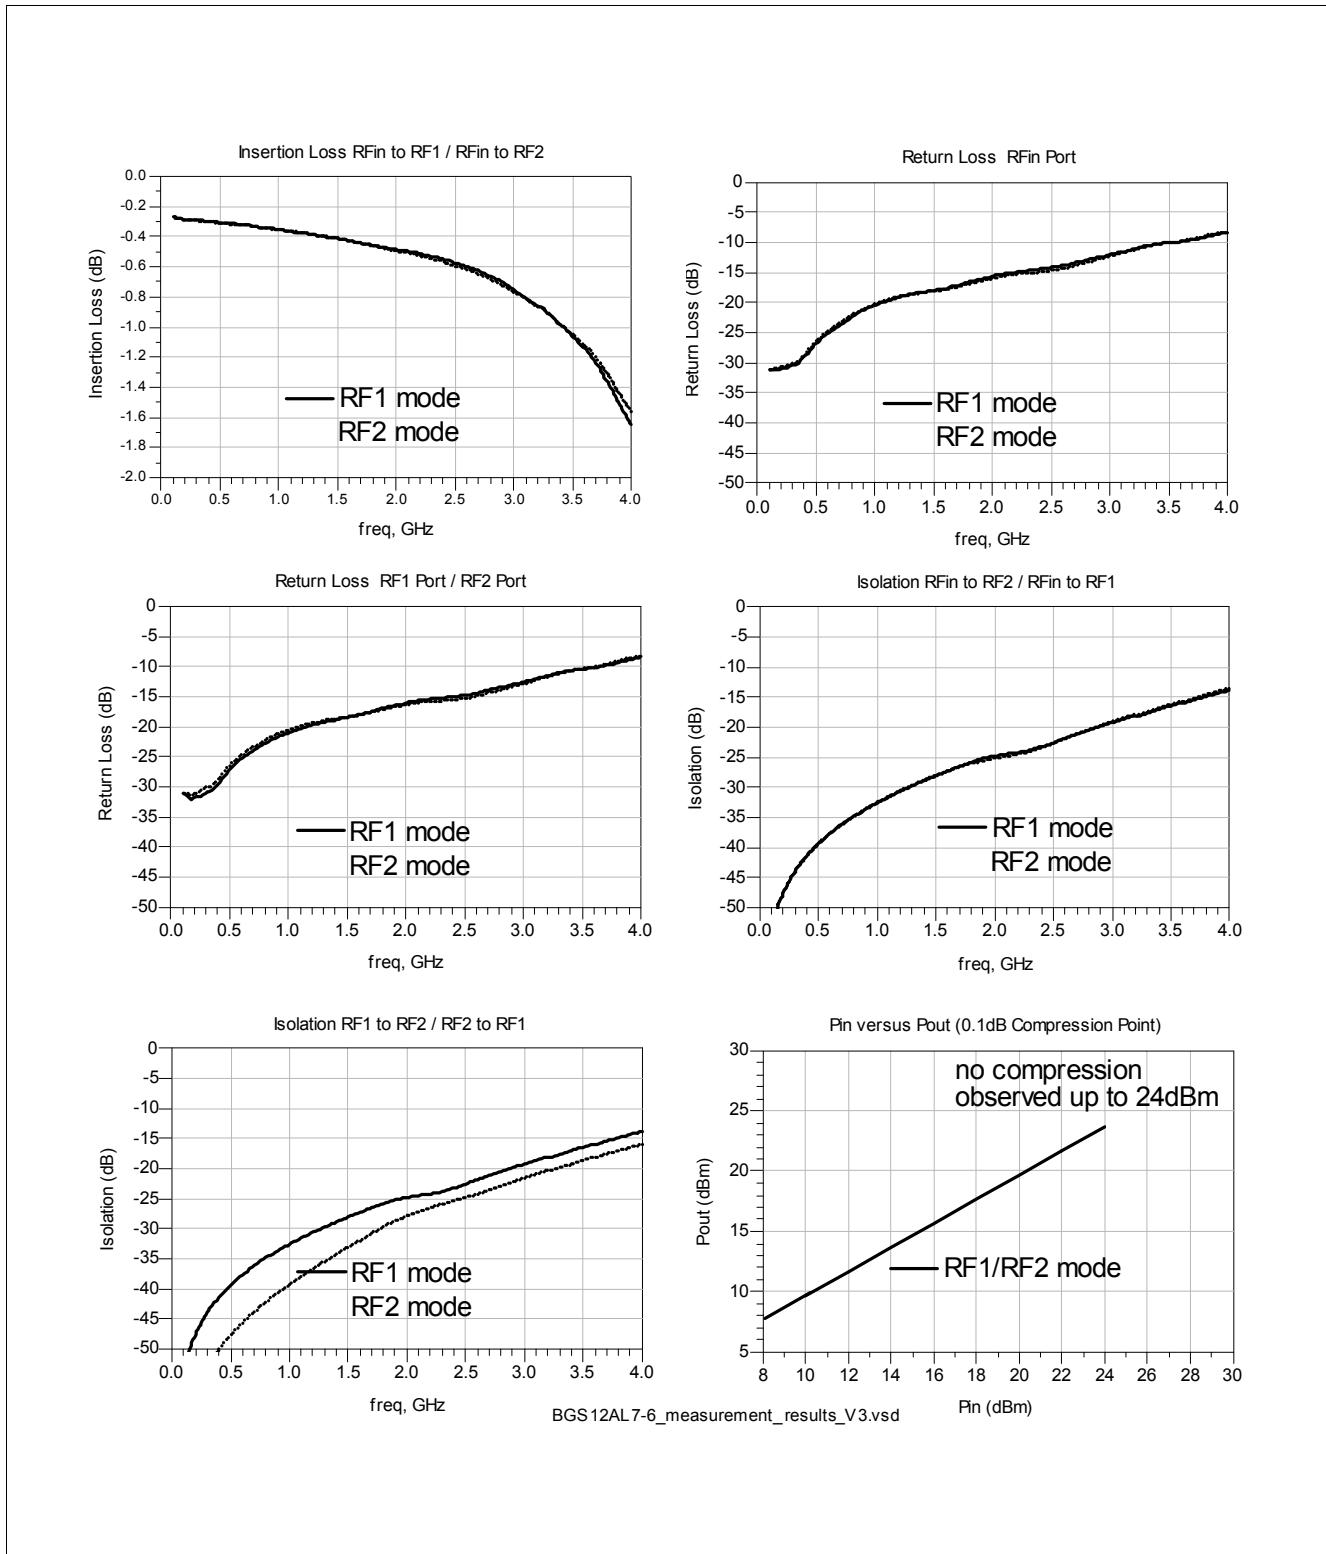

- Termination port impedance:  $Z_0 = 50 \Omega$
- Temperature range:  $T_A = -30 \text{ }^{\circ}\text{C}...+85 \text{ }^{\circ}\text{C}$
- Supply Voltage:  $V_{dd} = 2.8 \text{ V}$
- $P_{in} = 15 \text{ dBm}$
- Across operating range of control voltages:  $V_{CtrlH} = 1.4...2.8 \text{ V}$
