

# Ultra Low Voltage Boost Power Management IC for Solar and Thermal Energy Harvesting

## MB39C831

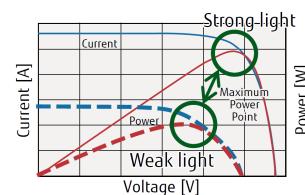

### Ultra Low Voltage Boost PMIC, Maximum Power Point Tracking

MB39C831 is a high efficiency, synchronous rectification boost DC/DC converter that can charge a Li-ion battery with a single solar cell and a multi-junction solar cell or Thermoelectric Generator (TEG). The DC/DC convertor can extract the maximum power point (MPP) of the power source and safely charges into Li-ion battery with the protection function.

MB39C831 can start up from 0.35V also and operates at very low voltage. As such it is suitable for various applications driving from a single solar cell.
