Description

The Cypress CY2 series of network circuits are produced using advanced 0.35-micron CMOS technology, achieving the industry's fastest logic.

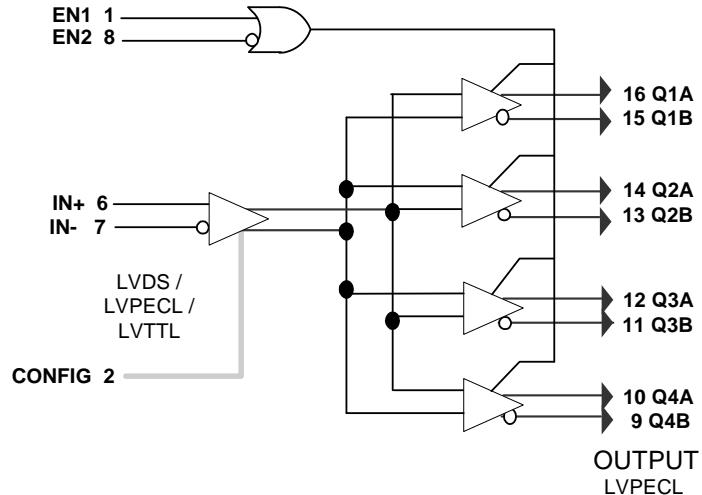

The Cypress CY2DP814 fanout buffer features a single LVDS- or a single LVPECL-compatible input and four LVPECL output pairs.

Designed for data communications clock management applications, the fanout from a single input reduces loading on the input clock.

The CY2DP814 is ideal for both level translations from single-ended to LVPECL, and/or for the distribution of LVDS-based clock signals. The Cypress CY2DP814 has configurable input between logic families. The input can be selectable for an LVPECL, LVTTL or LVDS signal, while the output drivers support LVPECL capable of driving 50-ohm lines.
