

**ALPHA & OMEGA**  
SEMICONDUCTOR

**AOTF4185**  
**40V P-Channel MOSFET**

### General Description

The AOTF4185 combines advanced trench MOSFET - 40V technology with a low resistance package to provide extremely low  $R_{DS(ON)}$ . This device is ideal for load switch and battery protection applications.

### Product Summary

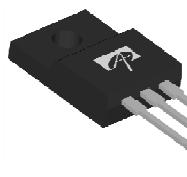

|                                   |                |
|-----------------------------------|----------------|
| $V_{DS}$                          | -40V           |
| $I_D$ (at $V_{GS}=-10V$ )         | -34A           |
| $R_{DS(ON)}$ (at $V_{GS}=-10V$ )  | < 16m $\Omega$ |
| $R_{DS(ON)}$ (at $V_{GS}=-4.5V$ ) | < 20m $\Omega$ |

A. The value of  $R_{\theta JA}$  is measured with the device in a still air environment with  $T_A=25^\circ\text{ C}$ .

B. The power dissipation  $P_D$  is based on  $T_{J(\text{MAX})}=175^\circ\text{ C}$ , using junction-to-case thermal resistance, and is more useful in setting the upper dissipation limit for cases where additional heatsinking is used.

C. Repetitive rating, pulse width limited by junction temperature  $T_{J(\text{MAX})}=175^\circ\text{ C}$ .

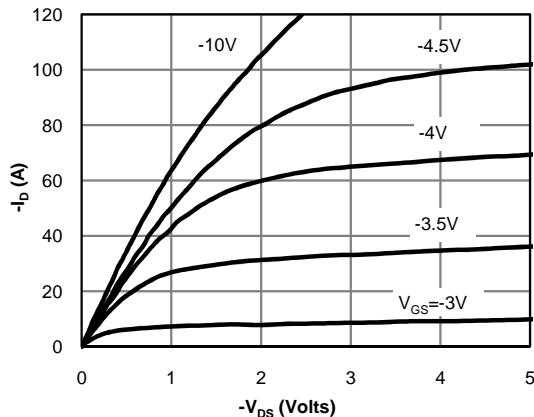

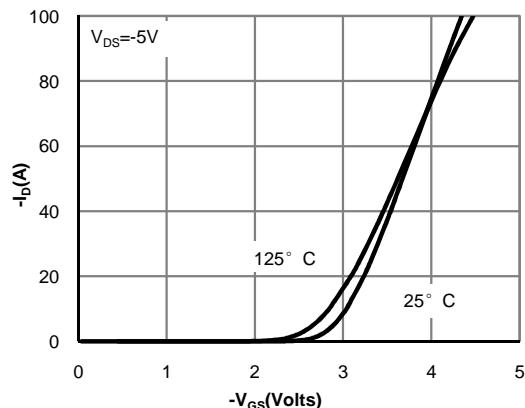

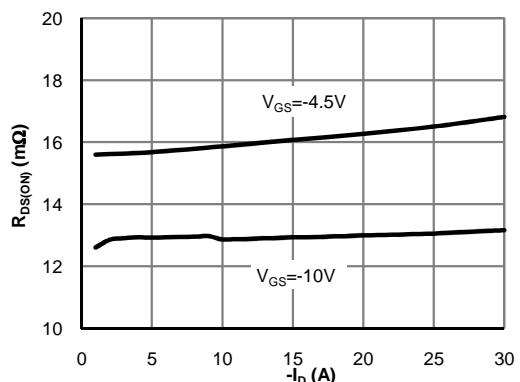

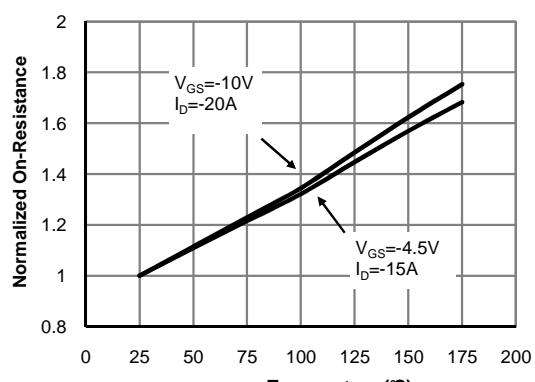

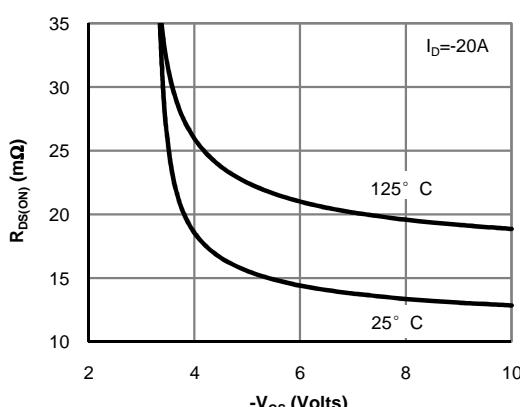

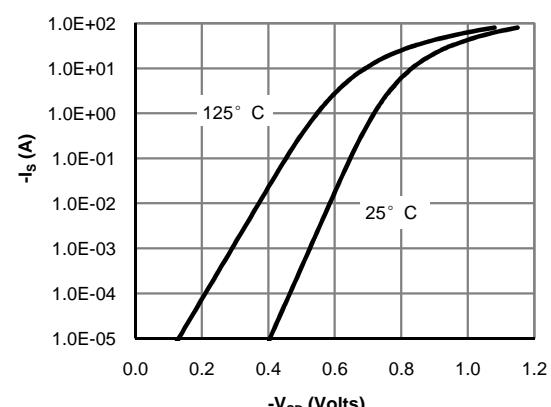

D. The  $R_{\theta JA}$  is the sum of the thermal impedance from junction to case  $R_{\theta JC}$  and case to ambient.

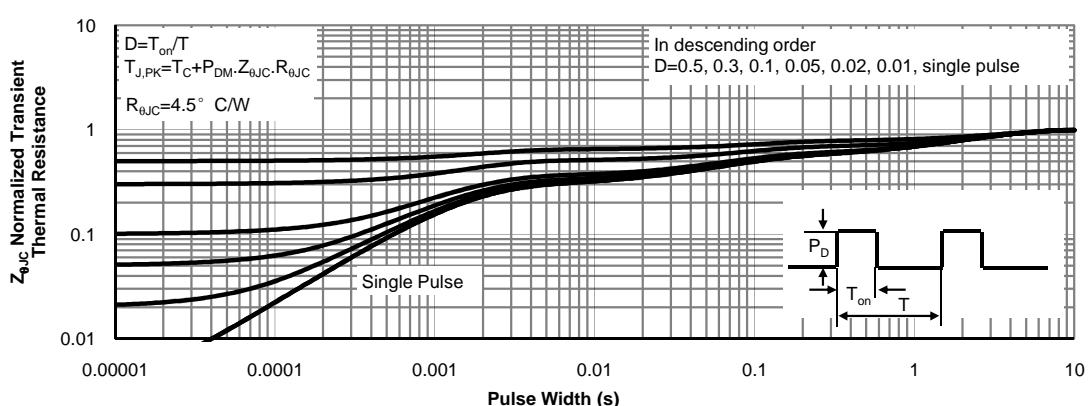

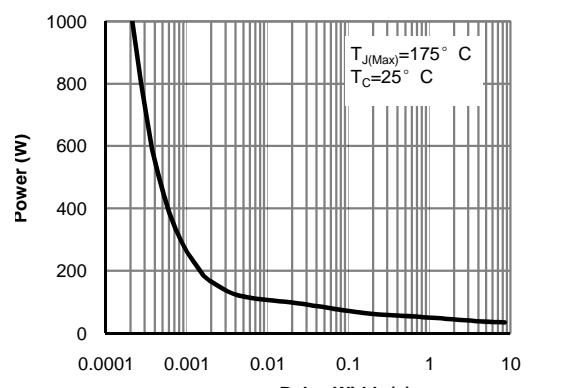

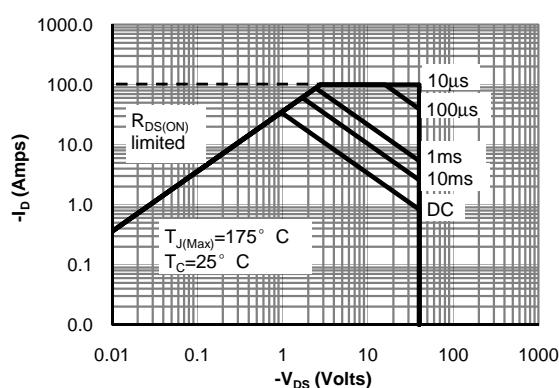

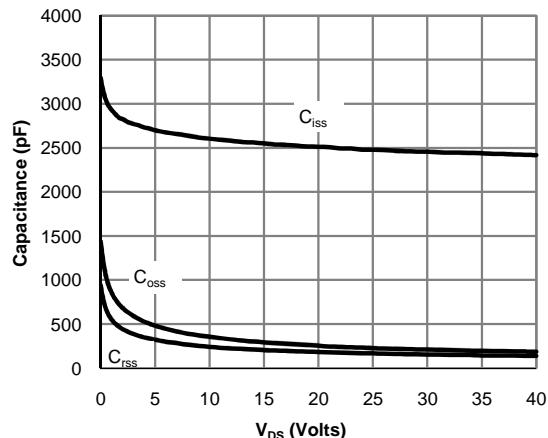

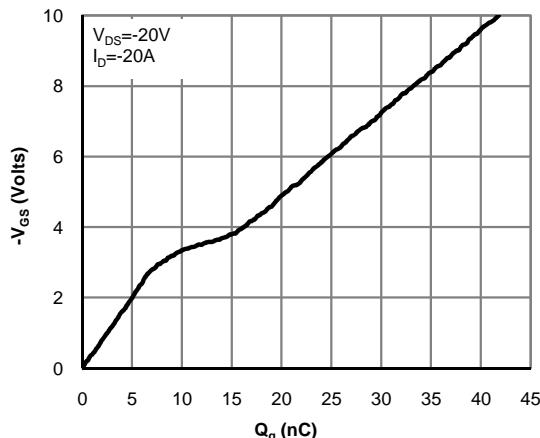

E. The static characteristics in Figures 1 to 6 are obtained using  $<300\mu\text{s}$  pulses, duty cycle 0.5% max.

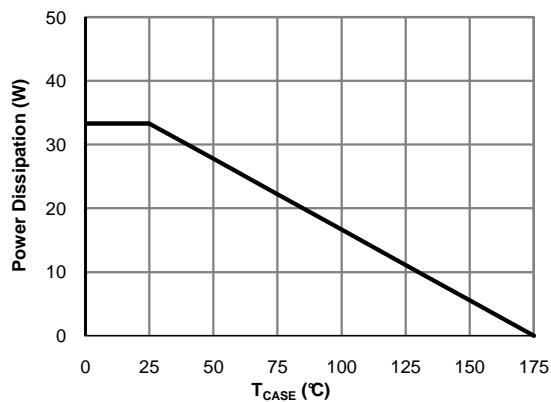

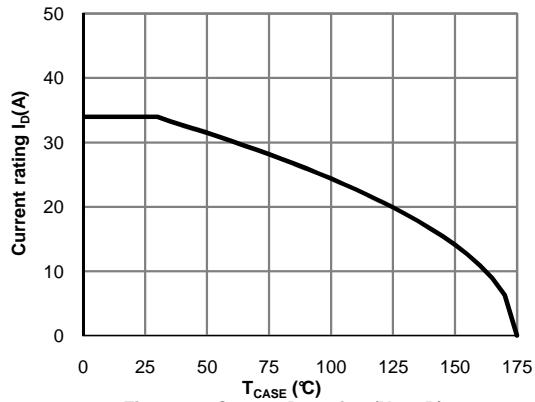

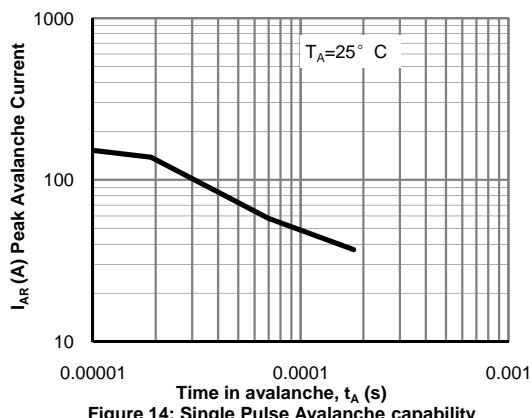

F. These curves are based on the junction-to-case thermal impedance which is measured with the device mounted to a large heatsink, assuming a maximum junction temperature of  $T_{J(\text{MAX})}=175^\circ\text{ C}$ .

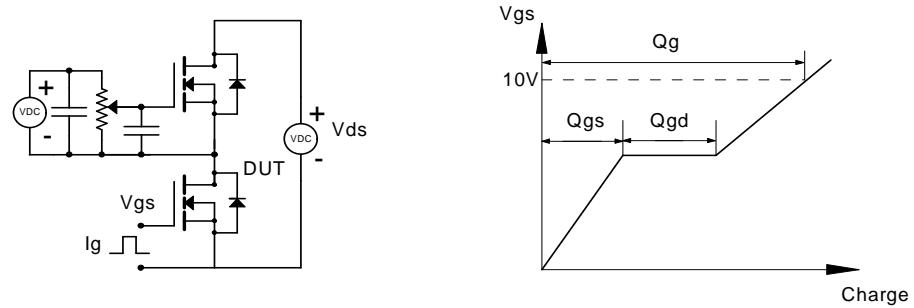

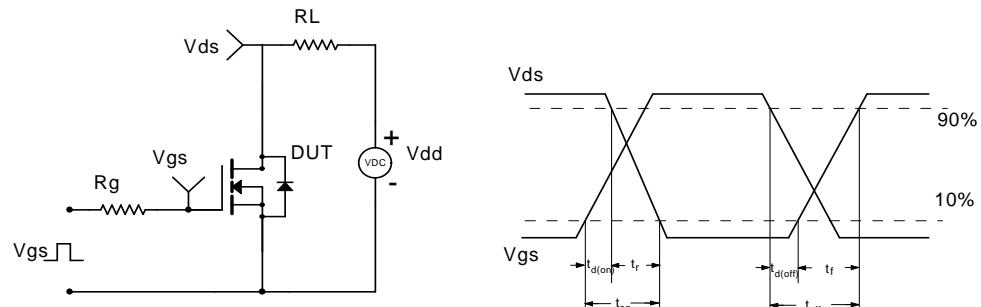

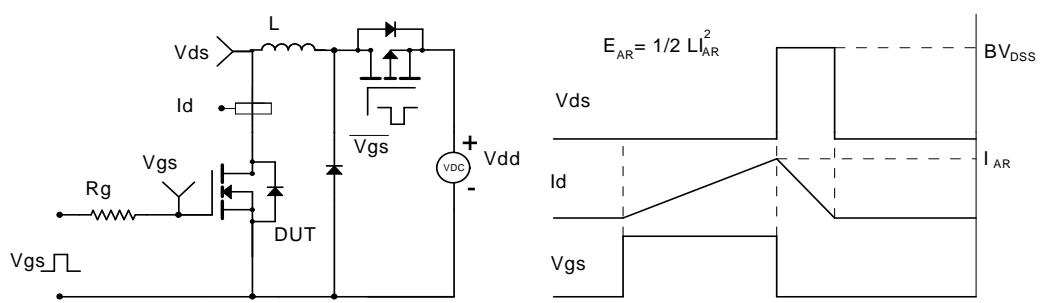

G. The maximum current rating is limited by bond-wires.
