

MC100ELT23

5 V Dual Differential PECL to TTL Translator

Description

The MC100ELT23 is a dual differential PECL to TTL translator. Because PECL (Positive ECL) levels are used, only +5 V and ground are required. The small outline 8-lead package and the dual gate design of the ELT23 makes it ideal for applications which require the translation of a clock and a data signal.

The PECL inputs are differential; therefore, the MC100ELT23 can accept any standard differential PECL input referenced from a V_{CC} of 5.0 V.

Features

- 3.5 ns Typical Propagation Delay
- 24 mA TTL Outputs
- Flow Through Pinouts
- The 100 Series Contains Temperature Compensation
- Operating Range $V_{CC} = 4.75$ V to 5.25 V with $GND = 0$ V
- Internal Input 50 K Ω Pulldown Resistors
- These Devices are Pb-Free, Halogen Free/BFR Free and are RoHS Compliant
