

Cree® XLamp® ML-C LEDs

PRODUCT DESCRIPTION

The Cree XLamp® ML-C LED brings lighting-class reliability and performance to 1/3-watt LEDs. The XLamp ML-C LED expands Cree's lighting-class leadership to LED bulbs and linear and distributed lighting applications. With XLamp LED lighting-class reliability, a wide viewing angle, uniform light output, and industry-leading chromaticity binning in a 3.5-mm X 3.5-mm package, the XLamp ML-C LED continues Cree's history of segment-focused product innovation in LEDs for lighting applications.

The XLamp ML-C LED brings high performance and a smooth look to a wide range of lighting applications, including linear lighting, fluorescent retrofits and retail-display lighting.

FEATURES

- Available in white (2600 K to 8300 K CCT), 80-, 85- and 90-CRI minimum
- Available in both parallel and series
- ANSI-compatible sub-bins
- Maximum drive current: 350 mA for parallel, 175 mA for series
- 120° viewing angle, uniform chromaticity profile
- Electrically neutral thermal path
- RoHS and REACH compliant
- UL® recognized component (E349212)

CHARACTERISTICS ($T_J = 25^\circ\text{C}$)

Characteristics	Unit	Minimum	Typical	Maximum
Thermal resistance, junction to solder point	$^\circ\text{C}/\text{W}$		13	
Viewing angle (FWHM)	degrees		120	
Temperature coefficient of voltage - parallel	$\text{mV}/^\circ\text{C}$		-3.4	
Temperature coefficient of voltage - series	$\text{mV}/^\circ\text{C}$		-6.8	
ESD classification (HBM per Mil-Std-883D) - parallel			Class 2	
ESD withstand voltage (HBM per Mil-Std-883D) - series	V			8000
DC forward current - parallel	mA			350
DC forward current - series	mA			175
Reverse voltage	V			-5
Forward voltage (@ 100 mA) - parallel	V		3.2	3.4
Forward voltage (@ 50 mA) - series	V		6.4	7.0
LED junction temperature	$^\circ\text{C}$			150

FLUX CHARACTERISTICS - ML-C PARALLEL ($T_J = 25^\circ\text{C}$)

The following table provides order codes for XLamp ML-C LEDs. For a complete description of the order-code nomenclature, please consult the Bin and Order Code Formats section (page 29).

Chromaticity		Minimum Luminous Flux (lm) @ 100 mA		Calculated Minimum Luminous Flux (lm) @ 300 mA*	Order Codes				
Kit	CCT	Code	Flux (lm)		75 CRI Typical	80 CRI Typical	80 CRI Minimum	85 CRI Minimum	90 CRI Minimum
DT	7000 K	K3	35.2	72.6	MLCAWT-A1-0000-0001DT				
		K2	30.6	63.1	MLCAWT-A1-0000-0000DT				
		J3	26.8	55.2	MLCAWT-A1-0000-000XDT

50	6200 K	K3	35.2	72.6	MLCAWT-A1-0000-000150				
		K2	30.6	63.1	MLCAWT-A1-0000-000050				
		J3	26.8	55.2	MLCAWT-A1-0000-000X50				

Notes:

- Cree maintains a tolerance of $\pm 7\%$ on flux and power measurements, ± 0.005 on chromaticity (CCx, CCy) measurements and ± 2 on CRI measurements. See the Measurements section (page 31).
- Cree XLamp ML-C LED order codes specify only a minimum flux bin and not a maximum. Cree may ship reels in flux bins higher than the minimum specified by the order code without advance notice. Shipments will always adhere to the chromaticity bin restrictions specified by the order code.
- Typical CRI for Cool White (4300 K – 8300 K CCT) is 75.
- Typical CRI for Warm White (2600 K – 4300 K CCT) is 80.
- Minimum CRI for 80-CRI White is 80.
- Minimum CRI for 85-CRI White is 85.
- Minimum CRI for 90-CRI White is 90
- * Calculated flux values are for reference only.

RELATIVE SPECTRAL POWER DISTRIBUTION**RELATIVE LUMINOUS FLUX VS. JUNCTION TEMPERATURE - ML-C PARALLEL: $I_F = 100 \text{ mA}$, ML-C SERIES: $I_F = 50 \text{ mA}$** 

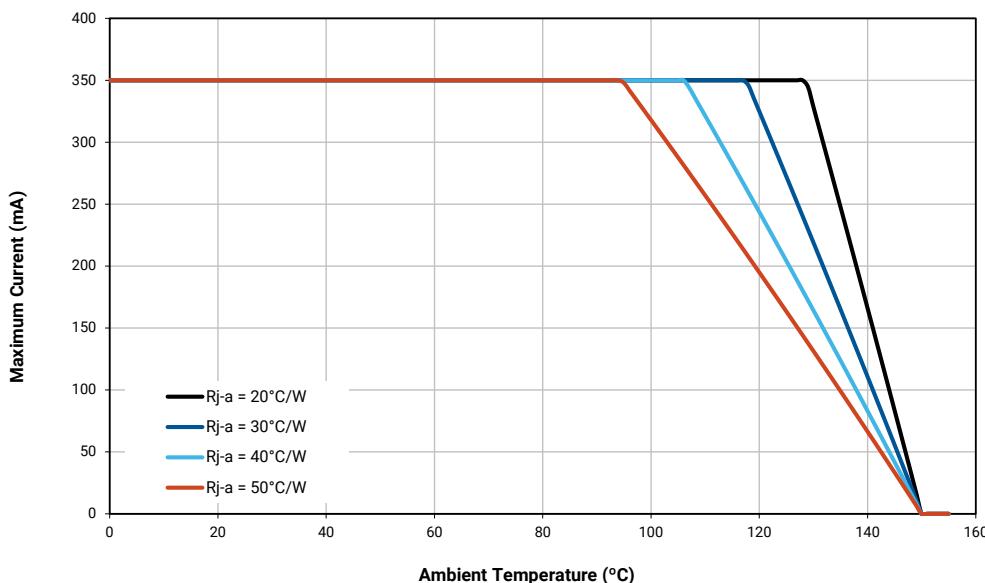

ELECTRICAL CHARACTERISTICS - ML-C PARALLEL ($T_J = 25^\circ\text{C}$)**ELECTRICAL CHARACTERISTICS - ML-C SERIES ($T_J = 25^\circ\text{C}$)**

RELATIVE LUMINOUS FLUX VS. CURRENT - ML-C PARALLEL ($T_J = 25^\circ\text{C}$)**RELATIVE LUMINOUS FLUX VS. CURRENT - ML-C SERIES ($T_J = 25^\circ\text{C}$)**

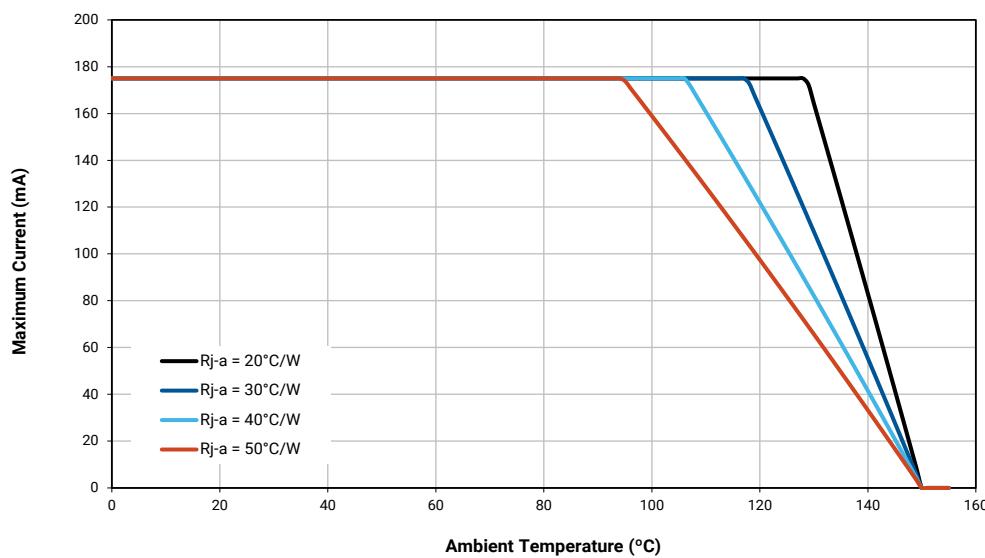

TYPICAL SPATIAL DISTRIBUTION

THERMAL DESIGN - ML-C PARALLEL

The maximum forward current is determined by the thermal resistance between the LED junction and ambient. It is crucial for the end product to be designed in a manner that minimizes the thermal resistance from the solder point to ambient in order to optimize lamp life and optical characteristics.

THERMAL DESIGN - ML-C SERIES

PERFORMANCE GROUPS – LUMINOUS FLUX

White XLamp ML-C LEDs are tested for luminous flux and placed into one of the following luminous-flux groups:

Group Code		Minimum Luminous Flux (lm)	Maximum Luminous Flux (lm)
H0*	H2 H3	18.1 18.1 20.6	23.5 20.6 23.5
J0*	J2 J3	23.5 23.5 26.8	30.6 26.8 30.6
K2		30.6	35.2
K3		35.2	39.8
M2		39.8	45.7

Notes:

- Flux codes H0 and J0 are further subdivided into H2, H3 and J2, J3, respectively. Orders for the H0 flux code may be filled with H2 or H3 sub-codes and orders for the J0 flux code may be filled with J2 or J3 sub-codes.

BIN AND ORDER CODE FORMATS

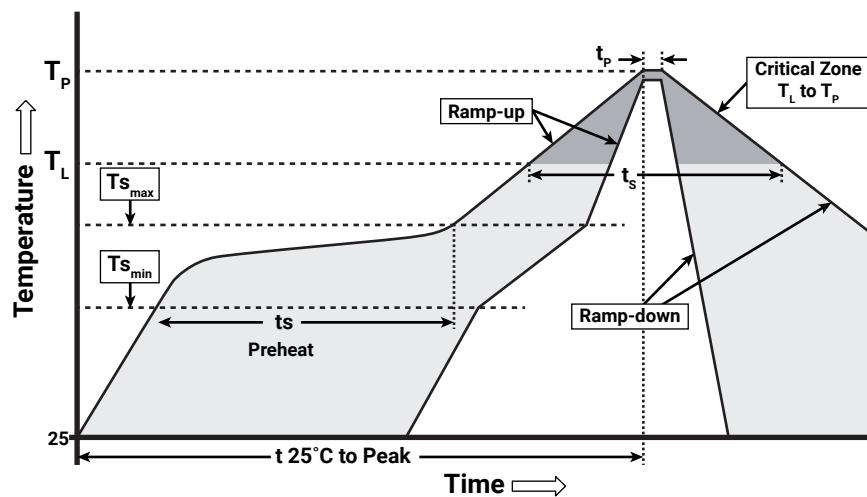

Bin codes and order codes are configured in the following manner:

REFLOW SOLDERING CHARACTERISTICS

In testing, Cree has found XLamp ML-C LEDs to be compatible with JEDEC J-STD-020C, using the parameters listed below. As a general guideline, Cree recommends that users follow the recommended soldering profile provided by the manufacturer of the solder paste used, and therefore it is the lamp or luminaire manufacturer's responsibility to determine applicable soldering requirements.

Note that this general guideline may not apply to all PCB designs and configurations of reflow soldering equipment.

IPC/JEDEC J-STD-020C

Profile Feature	Lead-Free Solder
Average Ramp-Up Rate ($T_{s_{\max}}$ to T_p)	1.2 °C/second
Preheat: Temperature Min ($T_{s_{\min}}$)	120 °C
Preheat: Temperature Max ($T_{s_{\max}}$)	170 °C
Preheat: Time ($t_{s_{\min}}$ to $t_{s_{\max}}$)	65-150 seconds
Time Maintained Above: Temperature (T_l)	217 °C
Time Maintained Above: Time (t_l)	45-90 seconds
Peak/Classification Temperature (T_p)	235 - 245 °C
Time Within 5 °C of Actual Peak Temperature (t_p)	20-40 seconds
Ramp-Down Rate	1 - 6 °C/second
Time 25 °C to Peak Temperature	4 minutes max.

Note: All temperatures refer to topside of the package, measured on the package body surface.

Note: While the high reflow temperatures (above) have been approved, Cree's best practice guideline for reflow is to use as low a temperature as possible during the reflow soldering process for these LEDs.

NOTES

Measurements

The luminous flux, radiant power, chromaticity, forward voltage and CRI measurements in this document are binning specifications only and solely represent product measurements as of the date of shipment. These measurements will change over time based on a number of factors that are not within Cree's control and are not intended or provided as operational specifications for the products. Calculated values are provided for informational purposes only and are not intended or provided as specifications.

Pre-Release Qualification Testing

Please read the [LED Reliability Overview](#) for details of the qualification process Cree applies to ensure long-term reliability for XLamp LEDs and details of Cree's pre-release qualification testing for XLamp LEDs.

Lumen Maintenance

Cree now uses standardized IES LM-80-08 and TM-21-11 methods for collecting long-term data and extrapolating LED lumen maintenance. For information on the specific LM-80 data sets available for this LED, refer to the public [LM-80 results document](#).

Please read the [Long-Term Lumen Maintenance application note](#) for more details on Cree's lumen maintenance testing and forecasting. Please read the [Thermal Management application note](#) for details on how thermal design, ambient temperature, and drive current affect the LED junction temperature.

Moisture Sensitivity

Cree recommends keeping XLamp ML-C LEDs in the provided, resealable moisture-barrier packaging (MBP) until immediately prior to soldering. Unopened MBPs that contain XLamp LEDs do not need special storage for moisture sensitivity.

Once the MBP is opened, XLamp ML-C LEDs should be handled and stored as MSL 2a per JEDEC J-STD-033, meaning they have limited exposure time before damage to the LED may occur during the soldering operation. The table on the right specifies the maximum exposure time in days depending on temperature and humidity conditions. LEDs with exposure time longer than the specified maximums must be baked according to the baking conditions listed below.

Temp.	Maximum Percent Relative Humidity						
	30%	40%	50%	60%	70%	80%	90%
35 °C	-	-	-	17	1	.5	.5
30 °C	-	-	-	28	1	1	1
25 °C	-	-	-	-	2	1	1
20 °C	-	-	-	-	2	1	1

Baking Conditions

It is not necessary to bake all XLamp ML-C LEDs. Only the LEDs that meet all of the following criteria must be baked:

1. LEDs that have been removed from the original MBP.
2. LEDs that have been exposed to a humid environment longer than listed in the Moisture Sensitivity section above.
3. LEDs that have not been soldered.

NOTES - CONTINUED

LEDs should be baked at 70 °C for 24 hours. LEDs may be baked on the original reels. Remove LEDs from the MBP before baking. Do not bake parts at temperatures higher than 70 °C. This baking operation resets the exposure time as defined in the Moisture Sensitivity section above.

Storage Conditions

XLamp ML-C LEDs that have been removed from the original MBP but not soldered should be stored in one of the following ways:

- Store the parts in a rigid metal container with a tight-fitting lid. Verify that the storage temperature is <30 °C, and place fresh desiccant and an RH indicator in the container to verify that the RH is no greater than 60%.
- Store the parts in a dry, nitrogen-purged cabinet or container that actively maintains the temperature at <30° and the RH at no greater than 60%.
- For short-term store only: LEDs can be resealed in the original MBP soon after opening. Fresh desiccant may be needed. Use the included humidity indicator card to verify <60% RH.

If an environment of <60% RH is not available for storage, XLamp ML-C LEDs should be baked (described above) before reflow soldering.

RoHS Compliance

The levels of RoHS restricted materials in this product are below the maximum concentration values (also referred to as the threshold limits) permitted for such substances, or are used in an exempted application, in accordance with EU Directive 2011/65/EC (RoHS2), as implemented January 2, 2013. RoHS Declarations for this product can be obtained from your Cree representative or from the [Product Ecology](#) section of the Cree website.

REACH Compliance

REACH substances of very high concern (SVHCs) information is available for this product. Since the European Chemical Agency (ECHA) has published notice of their intent to frequently revise the SVHC listing for the foreseeable future, please contact a Cree representative to insure you get the most up-to-date REACH SVHC Declaration. REACH banned substance information (REACH Article 67) is also available upon request.

UL® Recognized Component

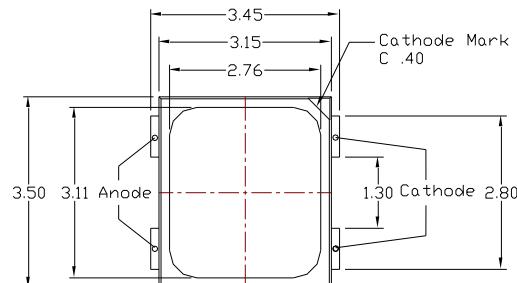

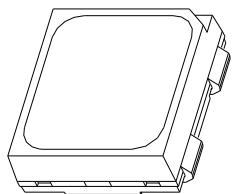

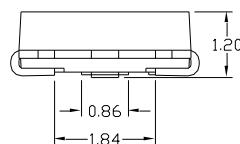

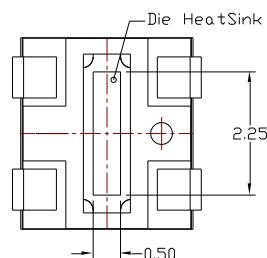

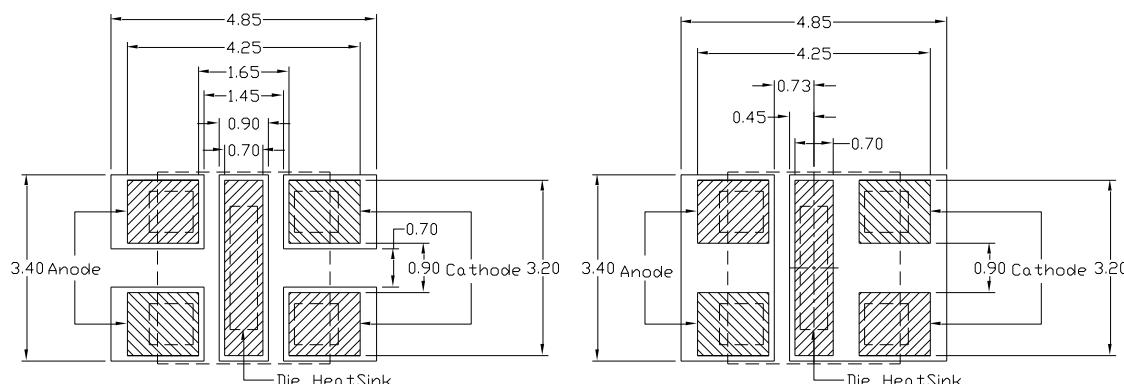

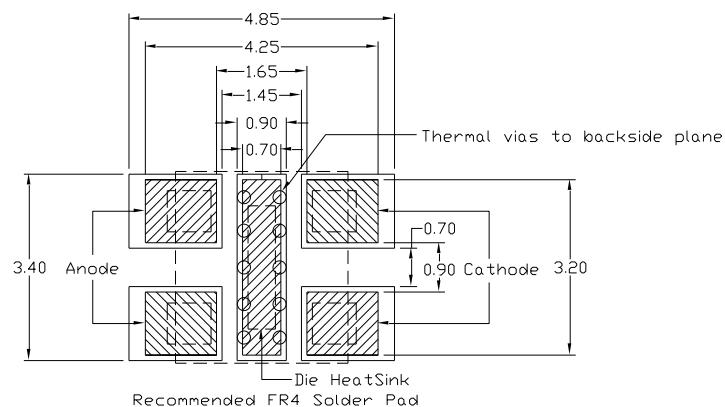

This product meets the requirements to be considered a UL Recognized Component with Level 4 enclosure consideration. The LED package or a portion thereof has been investigated as a fire and electrical enclosure per ANSI/UL 8750.

Vision Advisory

WARNING: Do not look at an exposed lamp in operation. Eye injury can result. For more information about LEDs and eye safety, please refer to the [LED Eye Safety application note](#).

MECHANICAL DIMENSIONS ($T_A = 25^\circ\text{C}$)
