2.4 GHz Surface Mount, Above Metal, Low Profile Mini Chip Antenna P/N 2450AT42E0100 This antenna must have metal directly underneath on bottom layer in order to function properly Detail Specification: 10/17/2016 Page 1 of 4

This is the Web version of this datasheet, for the full datasheet, please contact us at: www.johansontechnology.com/ask-a-question

General Specifications			
Part Number	2450AT42E0100		
Frequency (MHz)	2400 - 2480		
Peak Gain	-2.0 dBi typ. (YZ-V)		
Impedance	50Ω		
Power Capacity	2W max. (CW)		
Q'ty/Reel (pcs)	2,000 pcs		
Operating Temp	-40 to +85°C		
Storage Temp	-40 to +85°C		
Storage Period	18 months max.		

Total average radiated efficiency on PCB feature on "Mounting Considerations 1" (orderable EVB p/n: 2450AT42E0100-EB1SMA) is ~30%

This antenna was designed in mind for small coin cell, wearable, IoT, 2.4 BLE, 802.11, ISM, Zigbee, etc. applications in close-range networks where metal or a battery/display covers the entire length or side of the PCB or encasement must be present directly under the antenna and there's no room for usual/typical antenna metal clearance.

This antenna is specifically designed for PCBs that have 0.5-1mm of total thickness

Part Number Explanation					
P/N Suffix EVB p/n	Pooking Style	Bulk	Suffix = S	e.g 2450AT42E0100S	
	Facking Style	T&R	Suffix = E	e.g 2450AT42E0100E	
	EVB p/n	2450AT42E0100-EB1SMA (comes with 1 female SMA connector)			

¹Total Top layer area occupied by antenna is 6.3x3.0mm

²Make sure to have Pin 2 soldered to its PCB land pad but **not** connected to GND or input, it must be NC (or floating).

P/N 2450AT42E0100

Page 3 of 4

How To Choose The Correct Antenna Variant

Refer to the table below for substrate thickness and the corresponding antenna variation.

PCB Substrate Thickness	Recommended JTI PN
≤ 1.0mm	2450AT42E0100
1.0mm - 2.0mm	2450AT42E010 B
≥ 2.0mm	2450AT42E010 C

Typical Efficiency Values @ 2.44GHz for various scenarios for a 30x50mm PCB

The following efficiency values represent performance on a 30x50mm EVB like on page 2. Please note that antenna efficiency varies widely with board layout, size and surroundings.

PCB	Simulated Antenna Efficiency(%) @ 2.44GHz			
Substrate Thickness (H)	2450AT42E0100	2450AT42E010B	2450AT42E010C	
H = 0.12 mm	1.95%	1.02%	0.93%	
H = 0.7 mm	29.20%	9.30%	2.30%	
H = 1.5 mm	23.30%	41.90%	13.80%	
H = 2.5 mm	21.60%	34.20%	38.40%	

We encourage you to use a relatively thick dielectric layer below antenna, as we have seen a direct correlation between substrate thickness and antenna performance.

Note: "H" substrate thickness of <0.25mm (10mil) is not recommended. The component will still work and radiate, just not optimally.
