# CWDM MUX/DEMUX-8 Plug-in Module

- CWDM-8 plug-in module is a passive optical multiplexer /demultiplexer designed to add and drop CWDM wavelength channels to an existing backbone ring. The module multiplexes and demultiplexes eight CWDM wavelengths from a two-fiber ring, going in opposite directions into a network.
- This MUX/DEMUX module plugs into one half of a 1RU, 19" rack mount chassis for simple installation and modularity. This Chassis based system offers network equipment manufacturers a more scalable and higher-density solution to add CWDM capability to their existing and new networks with simple pluggable interface.
- Finisar's CWDM product delivers dramatic cost savings to network equipment manufacturers, enabling them to develop metro access systems that are lower in cost, easier to provision and simpler to operate.
