**GENERAL DESCRIPTION**

The ADM3050E-EP is a 5.7 kV rms isolated controller area network (CAN) physical layer transceiver with a high performance, basic feature set. The ADM3050E-EP fully meets the CAN flexible data rate (CAN FD) ISO 11898-2:2016 requirements and is further capable of supporting data rates as high as 12 Mbps.

The device employs Analog Devices, Inc., *iCoupler*<sup>®</sup> technology to combine a 2-channel isolator and a CAN transceiver into a single small outline integrated circuit (SOIC) surface-mount package. The ADM3050E-EP is a fully isolated solution for CAN and CAN FD applications. The ADM3050E-EP provides isolation between the CAN controller and physical layer bus. Safety and regulatory approvals (pending) for a 5.7 kV rms

withstand voltage, an 849 V<sub>PEAK</sub> working voltage, and a 12.8 kV surge test, ensure that the ADM3050E-EP meets application isolation requirements.

Low loop propagation delays and the extended common-mode range of  $\pm 25$  V support robust communication on longer bus cables. Dominant timeout functionality protects against bus lock up in a fault condition, and current limiting and thermal shutdown features protect against output short circuits. The CAN bus input and output pins are protected to  $\pm 40$  V against accidental connection to a +24 V bus supply. The device is fully specified over the -55°C to +125°C industrial temperature range.

Additional application and technical information can be found in the [ADM3050E](#) data sheet.

Stresses at or above those listed under Absolute Maximum Ratings may cause permanent damage to the product. This is a stress rating only; functional operation of the product at these or any other conditions above those indicated in the operational section of this specification is not implied. Operation beyond the maximum operating conditions for extended periods may affect product reliability.

## THERMAL RESISTANCE

Thermal performance is directly linked to PCB design and operating environment. Careful attention to PCB thermal design is required.

The thermal resistance value specified in Table 8 is simulated based on JEDEC specifications (unless specified otherwise) and must be used in compliance with JESD51-12.

Table 8. Thermal Resistance

Package Type	θ <sub>JA</sub>	Unit
RW-16 <sup>1</sup>	60	°C/W

<sup>1</sup> The θ<sub>JA</sub> value is based on simulations of a device mounted on a JEDEC standard, 4-layer board with fine width traces and still air. See the [ADM3050E](#) data sheet for the thermal model definitions.

## ESD CAUTION

**ESD (electrostatic discharge) sensitive device.**  
Charged devices and circuit boards can discharge without detection. Although this product features patented or proprietary protection circuitry, damage may occur on devices subjected to high energy ESD. Therefore, proper ESD precautions should be taken to avoid performance degradation or loss of functionality.

Table 9. Maximum Continuous Working Voltage<sup>1</sup>

Parameter	Insulation Rating (20-Year Lifetime) <sup>2</sup>	VDE 0884-11 Lifetime Conditions Fulfilled
AC Voltage		
Bipolar Waveform		
Basic Insulation	849 V <sub>PEAK</sub>	Lifetime limited by insulation lifetime per VDE-0884-11
Reinforced Insulation	707 V <sub>PEAK</sub>	Lifetime limited by insulation lifetime per VDE-0884-11
Unipolar Waveform		
Basic Insulation	1697 V <sub>PEAK</sub>	Lifetime limited by insulation lifetime per VDE-0884-11
Reinforced Insulation	1275 V <sub>PEAK</sub>	Lifetime limited by package creepage per IEC 60664-1
DC Voltage		
Basic Insulation	1560 V <sub>PEAK</sub>	Lifetime limited by package creepage per IEC 60664-1
Reinforced Insulation	780 V <sub>PEAK</sub>	Lifetime limited by package creepage per IEC 60664-1

<sup>1</sup> The maximum continuous working voltage refers to the continuous voltage magnitude imposed across the isolation barrier. See the [ADM3050E](#) data sheet for more details.

<sup>2</sup> Insulation capability without regard to creepage limitations. Working voltage may be limited by the PCB creepage when considering rms voltages for components soldered to a PCB (assumes Material Group I up to 1250 V rms), or by the SOIC\_W package creepage of 7.8 mm, when considering rms voltages for Material Group II.
