# Old Company Name in Catalogs and Other Documents

On April 1<sup>st</sup>, 2010, NEC Electronics Corporation merged with Renesas Technology Corporation, and Renesas Electronics Corporation took over all the business of both companies. Therefore, although the old company name remains in this document, it is a valid Renesas Electronics document. We appreciate your understanding.

Issued by: Renesas Electronics Corporation (http://www.renesas.com)

Send any inquiries to http://www.renesas.com/inquiry.

#### Notice

- 1. All information included in this document is current as of the date this document is issued. Such information, however, is subject to change without any prior notice. Before purchasing or using any Renesas Electronics products listed herein, please confirm the latest product information with a Renesas Electronics sales office. Also, please pay regular and careful attention to additional and different information to be disclosed by Renesas Electronics such as that disclosed through our website.
- Renesas Electronics does not assume any liability for infringement of patents, copyrights, or other intellectual property rights of third parties by or arising from the use of Renesas Electronics products or technical information described in this document. No license, express, implied or otherwise, is granted hereby under any patents, copyrights or other intellectual property rights of Renesas Electronics or others.
- 3. You should not alter, modify, copy, or otherwise misappropriate any Renesas Electronics product, whether in whole or in part.
- 4. Descriptions of circuits, software and other related information in this document are provided only to illustrate the operation of semiconductor products and application examples. You are fully responsible for the incorporation of these circuits, software, and information in the design of your equipment. Renesas Electronics assumes no responsibility for any losses incurred by you or third parties arising from the use of these circuits, software, or information.
- 5. When exporting the products or technology described in this document, you should comply with the applicable export control laws and regulations and follow the procedures required by such laws and regulations. You should not use Renesas Electronics products or the technology described in this document for any purpose relating to military applications or use by the military, including but not limited to the development of weapons of mass destruction. Renesas Electronics products and technology may not be used for or incorporated into any products or systems whose manufacture, use, or sale is prohibited under any applicable domestic or foreign laws or regulations.
- 6. Renesas Electronics has used reasonable care in preparing the information included in this document, but Renesas Electronics does not warrant that such information is error free. Renesas Electronics assumes no liability whatsoever for any damages incurred by you resulting from errors in or omissions from the information included herein.
- 7. Renesas Electronics products are classified according to the following three quality grades: "Standard", "High Quality", and "Specific". The recommended applications for each Renesas Electronics product depends on the product's quality grade, as indicated below. You must check the quality grade of each Renesas Electronics product before using it in a particular application. You may not use any Renesas Electronics product for any application categorized as "Specific" without the prior written consent of Renesas Electronics. Further, you may not use any Renesas Electronics. Renesas Electronics shall not be in any way liable for any damages or losses incurred by you or third parties arising from the use of any Renesas Electronics product for an application categorized as "Specific" or for which the product is not intended where you have failed to obtain the prior written consent of Renesas Electronics. The quality grade of each Renesas Electronics product is "Standard" unless otherwise expressly specified in a Renesas Electronics data sheets or data books, etc.
  - "Standard": Computers; office equipment; communications equipment; test and measurement equipment; audio and visual equipment; home electronic appliances; machine tools; personal electronic equipment; and industrial robots.
  - "High Quality": Transportation equipment (automobiles, trains, ships, etc.); traffic control systems; anti-disaster systems; anticrime systems; safety equipment; and medical equipment not specifically designed for life support.
  - "Specific": Aircraft; aerospace equipment; submersible repeaters; nuclear reactor control systems; medical equipment or systems for life support (e.g. artificial life support devices or systems), surgical implantations, or healthcare intervention (e.g. excision, etc.), and any other applications or purposes that pose a direct threat to human life.
- 8. You should use the Renesas Electronics products described in this document within the range specified by Renesas Electronics, especially with respect to the maximum rating, operating supply voltage range, movement power voltage range, heat radiation characteristics, installation and other product characteristics. Renesas Electronics shall have no liability for malfunctions or damages arising out of the use of Renesas Electronics products beyond such specified ranges.
- 9. Although Renesas Electronics endeavors to improve the quality and reliability of its products, semiconductor products have specific characteristics such as the occurrence of failure at a certain rate and malfunctions under certain use conditions. Further, Renesas Electronics products are not subject to radiation resistance design. Please be sure to implement safety measures to guard them against the possibility of physical injury, and injury or damage caused by fire in the event of the failure of a Renesas Electronics product, such as safety design for hardware and software including but not limited to redundancy, fire control and malfunction prevention, appropriate treatment for aging degradation or any other appropriate measures. Because the evaluation of microcomputer software alone is very difficult, please evaluate the safety of the final products or system manufactured by you.
- 10. Please contact a Renesas Electronics sales office for details as to environmental matters such as the environmental compatibility of each Renesas Electronics product. Please use Renesas Electronics products in compliance with all applicable laws and regulations that regulate the inclusion or use of controlled substances, including without limitation, the EU RoHS Directive. Renesas Electronics assumes no liability for damages or losses occurring as a result of your noncompliance with applicable laws and regulations.
- 11. This document may not be reproduced or duplicated, in any form, in whole or in part, without prior written consent of Renesas Electronics.
- 12. Please contact a Renesas Electronics sales office if you have any questions regarding the information contained in this document or Renesas Electronics products, or if you have any other inquiries.
- (Note 1) "Renesas Electronics" as used in this document means Renesas Electronics Corporation and also includes its majorityowned subsidiaries.
- (Note 2) "Renesas Electronics product(s)" means any product developed or manufactured by or for Renesas Electronics.

# RENESAS

M16C/1N Group SINGLE-CHIP 16-BIT CMOS MICROCOMPUTER

# 1. Overview

The M16C/1N group consists of single-chip microcomputers that use high-performance silicon gate CMOS processes and have a on-chip M16C/60 series CPU core. The microcomputers are housed in 48-pin plastic mold QFP package. These single-chip microcomputers have both high function instructions and high instruction efficiency and feature a one-megabyte address space and the capability to execute instructions at high speed.

# **1.1 Applications**

Automotive and industrial control systems, other automobile, other

# **1.2 Performance Overview**

Table 1.1 gives an overview of the M16C/1N group performance specification.

Item		Performance	
Number of basic instructions		91 instructions	
Shortest instruction execution time		62.5 ns (when f(XIN)=16MHz)	
Memory	ROM	See Table 1.2 Performance overview	
size	RAM	See Table 1.2 Performance overview	
I/O port		P0 to P5: 37 lines	
Multifunction	T1	8 bits x 1	
timer	TX, TY, TZ	8 bits x 3	
	TC	16 bits x 1	
Serial I/O (UAR	T or clock synchronous)	x 2	
A/D converter		x 12 channels	
(maximum res	olution: 10 bits)	(Expandable up to 14 channels)	
D/A converter		8 bits x 1	
CAN controller	ſ	1 channel, 2.0B active	
Watchdog time	er	15 bits x 1 (with prescaler)	
Interrupts		15 internal causes, 8 external causes, 4 software causes	
Clock generati	ng circuits	3 internal circuits	
Power supply	voltage	4.2 V to 5.5V (when f(XIN)=16MHz)	
Power consumption		70mW(Vcc=5.0V, f(XIN)=16MHz)	
I/O	I/O withstand voltage	5V	
characteristics	Output current	5mA (10mA:LED drive port)	
Device configu	uration	CMOS silicon gate	
Package		48-pin LQFP	

# 1.3 Block Diagram

Figure 1.1 shows block diagram of the M16C/1N group.

Figure 1.1 Block diagram

### **1.4 Performance Overview**

Table 1.2 shows performance overview.

Table 1.2 Performance overvie	W
-------------------------------	---

Table 1.2 Performance overview         As of June				
Type No.	ROM	RAM	Package	Remarks
M301N2M4T-XXXFP(D)	32Kbytes	1Kbytes		Mask ROM
M301N2M8T-XXXFP(D)				Mask ROM
M301N2F8TFP(D)	64Kbytes	3Kbytes	48P6Q-A	
M301N2F8FP(D)				Flash memory

(D): Under development

Figure 1.2 Type No., memory size, and package

# 1.5 Pin Configuration

Figure 1.3 shows pin configurations (top view) of the M16C/1N group.

Figure 1.3 Pin configuration diagram (top view)

# **1.6 Pin Description**

Table 1.3 shows the pin description.

# Table 1.3 Pin Description

Pin name	Signal name	I/O type	Function	
Vcc, Vss	Power supply input	Input	Supply 4.2 to 5.5 V to the Vcc pin. Supply 0 V to the Vss pin.	
IVcc	IVcc	Input	Connect a capacitor (0.1 $\mu F)$ between this pin and Vss.	
CNVss	CNVss	Input	Connect it to the Vss pin via resistance (about 5 k $\Omega$ ).	
RESET	Reset input	Input	A "L" on this input resets the microcomputer.	
Xin	Clock input	Input	These pins are provided for the main clock oscillation circuit. Connect a ceramic resonator or crystal between the XIN and	
Хоит	Clock output	Output	XOUT pins. To use an externally derived clock, input it to the XIN pin and leave the XOUT pin open.	
Vref	Reference voltage input	Input	This pin is a reference voltage input for the A/D converter.	
P00 to P07	I/O port P0	Input/output	This is an 8-bit CMOS I/O port. It has an input/output port direction register that allows the user to set each pin for input or output individually. When set for input, the user can specify in units of four bits via software whether or not they are tied to a pull-up resistor. These pins are shared with analog input pins. P02 and P03 function as CAN0 I/O pins by using software.	
P10 to P17	I/O port P1	Input/output	This is an 8-bit I/O port equivalent to P0. P10 to P13 are shared with analog inputs and key input interrupts. P14 to P16 are shared with serial I/O pins. P17 is shared with timer input. Can be used as an LED drive port.	
P20 to P21	I/O port P2	Input/output	This is a 2-bit I/O port equivalent to P0.	
P30 to P37	I/O port P3	Input/output	This is a 8-bit I/O port equivalent to P0. P30 to P33 are shared with timer input/output. P34 to P37 are shared with serial I/O. P34 is shared with analog outputs.	
P40 to P47	I/O port P4	Input/output	This is a 8-bit I/O port equivalent to P0. P40 to 41 are shared with analog inputs. P42 to P45 are shared with interrupt inputs. P46 to P47 are shared with the I/O pin of the clock oscillation circuit for the clock.	
P50 to P52	I/O port P5	Input/output	This is a 3-bit I/O port equivalent to P0. P50 and P51 function as CAN0 I/O pins by using software.	

# 2. Central Processing Unit (CPU)

Figure 2.1 shows the CPU registers. The CPU has 13 registers. Of these, R0, R1, R2, R3, A0, A1 and FB comprise a register bank. There are two register banks.

Figure 2.1 CPU Registers

# 2.1 Data Registers (R0, R1, R2, and R3)

The R0 register consists of 16 bits, and is used mainly for transfers and arithmetic/logic operations. R1 to R3 are the same as R0.

The R0 register can be separated between high (R0H) and low (R0L) for use as two 8-bit data registers. R1H and R1L are the same as R0H and R0L. Conversely R2 and R0 can be combined for use as a 32-bit data register (R2R0). R3R1 is the same as R2R0.

# 2.2 Address Registers (A0 and A1)

The A0 register consists of 16 bits, and is used for address register indirect addressing and address register relative addressing. They also are used for transfers and arithmetic/logic operations. A1 is the same as A0.

In some instructions, A1 and A0 can be combined for use as a 32-bit address register (A1A0).

# 2.3 Frame Base Register (FB)

FB is configured with 16 bits, and is used for FB relative addressing.

# 2.4 Interrupt Table Register (INTB)

INTB is configured with 20 bits, indicating the start address of an interrupt vector table.

# 2.5 Program Counter (PC)

PC is configured with 20 bits, indicating the address of an instruction to be executed.

# 2.6 User Stack Pointer (USP), Interrupt Stack Pointer (ISP)

Stack pointer (SP) comes in two types: USP and ISP, each configured with 16 bits. Your desired type of stack pointer (USP or ISP) can be selected by the U flag of FLG.

# 2.7 Static Base Register (SB)

SB is configured with 16 bits, and is used for SB relative addressing.

# 2.8 Flag Register (FLG)

FLG consists of 11 bits, indicating the CPU status.

2.8.1 Carry Flag (C Flag)

This flag retains a carry, borrow, or shift-out bit that has occurred in the arithmetic/logic unit.

#### 2.8.2 Debug Flag (D Flag)

This flag is used exclusively for debugging purpose. During normal use, it must be set to "0".

#### 2.8.3 Zero Flag (Z Flag)

This flag is set to "1" when an arithmetic operation resulted in 0; otherwise, it is "0".

#### 2.8.4 Sign Flag (S Flag)

This flag is set to "1" when an arithmetic operation resulted in a negative value; otherwise, it is "0".

### 2.8.5 Register Bank Select Flag (B Flag)

Register bank 0 is selected when this flag is "0"; register bank 1 is selected when this flag is "1".

### 2.8.6 Overflow Flag (O Flag)

This flag is set to "1" when the operation resulted in an overflow; otherwise, it is "0".

#### 2.8.7 Interrupt Enable Flag (I Flag)

This flag enables a maskable interrupt.

Maskable interrupts are disabled when the I flag is "0", and are enabled when the I flag is "1". The I flag is set to "0" when the interrupt request is accepted.

### 2.8.8 Stack Pointer Select Flag (U Flag)

ISP is selected when the U flag is "0"; USP is selected when the U flag is "1".

The U flag is set to "0" when a hardware interrupt request is accepted or an INT instruction for software interrupt Nos. 0 to 31 is executed.

### 2.8.9 Processor Interrupt Priority Level (IPL)

IPL is configured with three bits, for specification of up to eight processor interrupt priority levels from level 0 to level 7.

If a requested interrupt has priority greater than IPL, the interrupt request is enabled.

#### 2.8.10 Reserved Area

When white to this bit, write "0". When read, its content is indeterminate.

# 3. Memory

Figure 3.1 is a memory map. The address space extends the 1M bytes from address 0000016 to FFFF16. From FFFFF16 down is ROM. For example, in the M301N2M4T-XXXFP, there is 32K bytes of internal ROM from F800016 to FFFFF16. The vector table for fixed interrupts such as the reset are mapped to FFFDC16 to FFFFF16. The starting address of the interrupt routine is stored here. The address of the vector table for timer interrupts, etc., can be set as desired using the internal register (INTB). See the section on interrupts for details.

From 0040016 up is RAM. For example, in the M301N2M4T-XXXFP, there is 1K byte of internal RAM from 0040016 to 007FF16. In addition to storing data, the RAM also stores the stack used when calling subroutines and when interrupts are generated.

The SFR area is mapped to 0000016 to 003FF16. This area accommodates the control registers for peripheral devices such as I/O ports, A/D converter, serial I/O, and timers, etc. Any part of the SFR area that is not occupied is reserved and cannot be used for other purposes.

The special page vector table is mapped to FFE0016 to FFFDB16. If the starting addresses of subroutines or the destination addresses of jumps are stored here, subroutine call instructions and jump instructions can be used as 2-byte instructions, reducing the number of program steps.

Figure 3.1 Memory map

# 5. Electrical Characteristics

 Table 5.1 Absolute maximum ratings

Symbol		Parameter	Condition	Rated value	Unit
Vcc	Supply voltage			- 0.3 to 6.5	V
Vı	Input voltage	RESET, VREF, XIN           P00 to P07, P10 to P17, P20, P21,           P30 to P37, P40 to P47, P50 to P52, CNVss (Note 1)		- 0.3 to Vcc + 0.3	V
Vo	Output voltage	Itput voltage P00 to P07, P10 to P17, P20, P21, P30 to P37, P40 to P47, P50 to P52, Xout		- 0.3 to Vcc + 0.3	V
		IVcc		- 0.3 to 2.8V	V
Pd	Power dissipatio	n	Topr = 25 °C	300	mW
Topr	Operating ambie	ent temperature		- 40 to 85 (Note 2)	°C
Tstg	Storage tempera	ature		- 65 to 150	°C

Note 1: CNVss pin of flash memory version: -0.3 to 6.5 V

Note 2: When flash memory version is program/erase mode: 0 to 60 °C

Table 5.2 Recommended operating conditions
(Unless otherwise noted: Vcc = 4.2V to 5.5V, Topr = -40 to 85°C)

O		Demonster			Standard		11
Symbol		Parameter		Min	Тур.	Max.	Unit
Vcc	Supply voltage			4.2	5.0	5.5	V
Vss	Supply voltage				0		V
Vih	HIGH input voltage	P00 to P07, P10 to P17, P20, P21, P30 P50 to P52, XIN, RESET, CNVss	to P37, P40 to P47,	0.8Vcc		Vcc	V
VIL	LOW input voltage	P00 to P07, P10 to P17, P20, P21, P30 P50 to P52, XIN, RESET, CNVss	to P37, P40 to P47,	0		0.2Vcc	V
IOH (peak)	HIGH peak output current	P00 to P07, P10 to P17, P20, P21, P30 to P37, P40 to P47, P50 to P52				- 10.0	mA
IOH (avg)	HIGH average output current	P00 to P07, P10 to P17, P20, P21, P30 P50 to P52	to P37, P40 to P47,			- 5.0	mA
IOL (peak)	LOW peak	P00 to P07, P20, P21, P30 to P37, P40	to P47, P50 to P52			10.0	mA
	output current	P1o to P17	HIGH POWER			20.0	mA
			LOW POWER			10.0	
IOL (avg)	LOW average	P00 to P07, P20, P21, P30 to P37, P40	to P47, P50 to P52			5.0	mA
	output current	P10 to P17	HIGH POWER			10.0	mA
			LOW POWER			5.0	
f (XIN)	Main clock input	oscillation frequency (Note 3)	Vcc=4.2V to 5.5V	0		16	MHz
f (Xcin)	Subclock oscillat	ion frequency			32.768	50	kHz

Note 1: The average output current is an average value measured over 100ms.

Note 2: Keep output current as follows:

The sum of port P00 to P03, P13 to P17, P21, P34 to P37, P46, P47, P50 to P52 IoL (peak) is under 60 mA. The sum of port P00 to P03, P13 to P17, P21, P34 to P37, P46, P47, P50 to P52 IoH (peak) is under 60 mA. The sum of port P04 to P07, P10 to P12, P20, P30 to P33, P40 to P45 IoL (peak) is under 60 mA. The sum of port P04 to P07, P10 to P12, P20, P30 to P33, P40 to P45 IoH (peak) is under 60 mA.

Note 3: Relationship between main clock oscillation frequency and supply voltage is shown as below.

# Table 5.3 Electrical characteristics (1)<br/>(Unless otherwise noted: Vcc = 5V, Vss = 0V at Topr = -40 to 85°C, f(XIN) = 16MHz)

			Flash memory			0.8	3	μA															

### Table 5.5 Power supply timing circuit characteristics

Symbol	Parameter	Macauring condition	S	Unit		
Symbol	Parameter	Measuring condition	Min.	Тур.	Max.	Unit
td(P-R)	Timer for internal power supply stabili- zation during powering-on				2	ms
td(R-S)	Stop release time				150	μs
td(W-S)	Wait release time during low power dis- sipation mode	Vcc = 4.2 to 5.5 V			150	μs
td(M-L)	Timer for internal power supply stabili- zation when main clock oscillation starts				150	μs

# Table 5.6 Flash memory version electrical characteristics(Unless otherwise noted: Vcc = 4.2 to 5.5 V, Topr= 0 to 60°C)

Cumhal	Parameter		Standard				
Symbol			Min.	Typ. (Note 1)	Max.	Unit	
-	Erase/write cycle (No	ote 2)	100 (Note 3)			cycle	
-	Word programming time			75	600	μs	
-	Block erasing time	2Kbyte block		0.2	9	s	
		8Kbyte block		0.4	9	S	
		16Kbyte block		0.7	9	S	
		32Kbyte block		1.2	9	S	
td(SR-ES)	Transition time from	Transition time from erasure operation			20		
	to erase-suspend				20	ms	
-	Data retention		10			year	

Note1: Vcc=5.0V, Topr=25°C

Note2: Definition of Programming and erasure times

The Programming and erasure times are defined to be per-block erasure times. For example a case where a 2Kbyte block is programmed in 1,024 operations by writing one word at a time and erased thereafter. Performing multiple programs to the same address before an erase operation is prohibited.

Note 3: Minimum number of programming/erasure for which operation is guaranteed.

#### Table 5.7 A/D conversion characteristics (Unless otherwise noted: Vcc = VREF = 5V, Vss = 0V at Topr = 25°C, f(XIN) = 16MHz)

					Standard			
Symbol		Parameter	Measuring condition		2	tandar	a	Unit
Cynisor			Measuring	goonation	Min.	Тур.	Max.	Onit
-	Resolution	l	Vref=Vcc				10	Bits
-	Absolute	Sample & hold function not available	Vref =Vcc = 5V	1			±3	LSB
	accuracy	Sample & hold function available(10bit)	VREF =VCC = 5V	ANo to AN11 input			±3	LSB
				ANEX <sub>0</sub> , ANEX <sub>1</sub> input, external op-amp connected mode			±7	LSB
		Sample & hold function available(8bit)	Vref =Vcc = 5V	1			±2	LSB
RLADDER	Ladder res	sistance	Vref =Vcc		10		40	kΩ
<b>t</b> CONV	Conversio	n time(10bit)	f(XIN)=10MHz, Ø	Øad=fad=10MHz	3.3			μs
<b>t</b> CONV	Conversion time(8bit)		f(XIN)=10MHz, Ø	Øad=fad=10MHz	2.8			μs
<b>t</b> SAMP	Sampling time		f(XIN)=10MHz, Ø	Øad=fad=10MHz	0.3			μs
Vref	Reference voltage		f(XIN)=10MHz, Ø	Øad=fad=10MHz	2		Vcc	V
VIA	Analog inp	out voltage	f(XIN)=10MHz, Ø	Øad=fad=10MHz	0		Vref	V

Note 1: Divide the fAD if f(XIN) exceeds 10MHz, and make AD operation clock frequency (ØAD) equal to or lower than 10MHz.

#### Table 5.8 D/A conversion characteristics (Unless otherwise noted: VCC = VREF = 5V, VSS = 0V at Topr = 25°C, f(XIN) = 16MHz)

Currents al	Deveryotar		S	Linit		
Symbol	Parameter	Measuring condition	Min.	Тур.	Max.	Unit
-	Resolution				8	Bits
-	Absolute accuracy				1.0	%
tsu	Setup time				3	μs
Ro	Output resistance		4	10	20	kΩ
Ivref	Reference power supply input current	(Note 1)			1.5	mA

Note 1: The A/D converter's ladder resistance is not included.

When D/A register contents are not "0016", the current IVREF always flows even though VREF may have been set to be unconnected by the A/D control register.

# 5.1 Timing requirements

(Unless otherwise noted: Vcc = 5V, Vss = 0V at Topr = -40 to 85°C)

#### Table 5.9 XIN input

Symbol	Parameter	Standard		Unit
	Parameter	Min. Max.		
tc(XIN)	XIN input cycle time	62.5		ns
twH(XIN)	XIN input HIGH pulse width	30		ns
twL(XIN)	XIN input LOW pulse width	30		ns

#### Table 5.10 CNTR0 input

Symbol	Parameter	Standard		Unit
	Parameter	Min. N	Max.	Unit
tc(CNTR0)	CNTRo input cycle time	100		ns
twH(CNTR0)	CNTRo input HIGH pulse width	40		ns
twL(CNTR0)	CNTRo input LOW pulse width	40		ns

#### Table 5.11 TCIN input

Symbol	Parameter	Star	ndard	Unit
	Farameter	Min.	Max.	
tc(TCIN)	TCIN input cycle time	400(Note 1)		ns
twH(TCIN)	TCIN input HIGH pulse width	200(Note 2)		ns
twL(TCIN)	TCIN input LOW pulse width	200(Note 2)		ns

Note 1: Use the greater value, either (1/digital filter clock frequency X 6) or min. value.

Note 2: Use the greater value, either (1/digital filter clock frequency X 3) or min. value.

#### Table 5.12 Serial I/O

Symbol	Parameter	Standard		Linit
		Min.	Max.	Unit
tc(CK)	CLKi input cycle time	200		ns
tw(CKH)	CLKi input HIGH pulse width	100		ns
tw(CKL)	CLKi input LOW pulse width	100		ns
td(C-Q)	TxDi output delay time		80	ns
th(C-Q)	TxDi hold time	0		ns
tsu(D-C)	RxDi input setup time	30		ns
th(C-D)	RxDi input hold time	90		ns

#### Table 5.13 External interrupt INTi input

Symbol	Parameter	Standard		Linit
		Min.	Max.	Unit
tw(INH)	INTi input HIGH pulse width	250(Note 1)		ns
tw(INL)	INTi input LOW pulse width	250(Note 2)		ns

Note 1: When the INTo input filter select bit selects the digital filter, use the INTo input HIGH pulse width to the greater value, either (1/digital filter clock frequency X 3) or min. value.

Note 2: When the INTo input filter select bit selects the digital filter, use the INTo input LOW pulse width to the greater value, either (1/digital filter clock frequency X 3) or min. value.

Keep safety first in your circuit designs! 1. Renesas Technology Corp. puts the maximum effort into making semiconductor products better and more reliable, but there is always the possibility that trouble may occur with them. Trouble with semiconductors may lead to personal injury, fire or property damage. Remember to give due consideration to safety when making your circuit designs, with appropriate measures such as (i) placement of substitutive, auxiliary circuits, (ii) use of nonflammable material or (iii) prevention against any malfunction or mishap.

#### Notes regarding these materials

- Notes regarding these materials
  These materials are intended as a reference to assist our customers in the selection of the Renesas Technology Corp. product best suited to the customer's application; they do not convey any license under any intellectual property rights, or any other rights, belonging to Renesas Technology Corp. or a third party.
  Renesas Technology Corp. assumes no responsibility for any damage, or infringement of any third-party's rights, originating in the use of any product data, diagrams, charts, programs, algorithms, or circuit application examples contained in these materials.
  All information contained in these materials, including product data, diagrams, charts, programs and algorithms represents information on products at the time of publication of these materials, and are subject to change by Renesas Technology Corp. without notice due to product improvements or other reasons. It is therefore recommended that customers contact Renesas Technology Corp. van a authorized Renesas Technology Corp. product distributor for the latest product information before purchasing a product listed herein.
  The information described here may contain technical inaccuracies or typographical errors. Renesas Technology Corp. assumes no responsibility for any damage, liability, or other loss rising from these inaccuracies or errors. Please also pay attention to information before purchasion.
  When using any or all of the information contained in these materials, including product data, diagrams, charts, programs, and algorithms, please be sure to evaluate all information actual system before making a final decision on the applicability of the information and products. Renesas Technology Corp. assumes no responsibility for any damage or manufactured for use in a device or system that is used under circumstances in which human life is potentially at stake. Please contact Renesas Technology Corp. an authorized Renesas Technology Corp. product distributor when c
- use. 6. The prior written approval of Renesas Technology Corp. is necessary to reprint or reproduce in whole or in part these materials. 7. If these products or technologies are subject to the Japanese export control restrictions, they must be exported under a license from the Japanese government and cannot be imported into a country other than the approved destination. Any diversion or reexport contrary to the export control laws and regulations of Japan and/or the country of destination is prohibited. 8. Please contact Renesas Technology Corp. for further details on these materials or the products contained therein.
