## Description

The SMP1325-087LF is a surface mountable PIN diode suitable for use in an RF switch or attenuator circuit.

Maximum resistance at 100 mA is 0.55  $\Omega$  and maximum capacitance at 20 V is 0.6 pF. The combination of low capacitance, low parasitic inductance, and nominal 100  $\mu\text{m}$  I-region width, makes the SMP1325-087LF useful in large signal switches and attenuator applications.

The device has a 1 W dissipation power rating, which makes it capable of handling up to 25 W Continuous Wave (CW) and 250 W peak (1  $\mu\text{s}$  pulse, 1 percent duty cycle) in a series-connected transmit/receive (T/R) switch.

Design information for high power switches may be found in the Skyworks Application Note, *Design With PIN Diodes* (document number 200312).

**Table 1. SMP1325-087LF Absolute Maximum Ratings**

Parameter	Symbol	Minimum	Maximum	Units
Forward current	I <sub>F</sub>		200	mA
Reverse voltage	V <sub>R</sub>		200	V
Dissipated power @ 85 °C	P <sub>D</sub>		1	W
Operating temperature	T <sub>A</sub>	-55	+85	°C
Storage temperature	T <sub>STG</sub>	-55	+200	°C
Junction temperature	T <sub>J</sub>	-55	+175	°C

**Note:** Exposure to maximum rating conditions for extended periods may reduce device reliability. There is no damage to device with only one parameter set at the limit and all other parameters set at or below their nominal value. Exceeding any of the limits listed here may result in permanent damage to the device.

**CAUTION:** Although this device is designed to be as robust as possible, Electrostatic Discharge (ESD) can damage this device. This device must be protected at all times from ESD. Static charges may easily produce potentials of several kilovolts on the human body or equipment, which can discharge without detection. Industry-standard ESD precautions should be used at all times.

## Package and Handling Information

Instructions on the shipping container label regarding exposure to moisture after the container seal is broken must be followed. Otherwise, problems related to moisture absorption may occur when the part is subjected to high temperature during solder assembly.

The SMP1325-087LF is rated to Moisture Sensitivity Level 1 (MSL1) at 260 °C. It can be used for lead or lead-free soldering. For additional information, refer to the Skyworks Application Note, *Solder Reflow Information*, document number 200164.

Care must be taken when attaching this product, whether it is done manually or in a production solder reflow environment. Production quantities of this product are shipped in a standard tape and reel format.
