Pin Assignment

Block Diagram and Application Circuit Example

Formula of Output Voltage Adjustment

$$V_{OUT} = V_{ADJ} (\approx 1.25V) \times (R1 + R2) / R1$$

Note: Set the resistance of R1 and R2 so that a large enough current flows through the two resistors, making the effect on the source current from the ADJ pin negligible.

Startup Method

This IC can be started in one of the following two ways:

- (1) Start the IC by turning on and off the EN pin after applying power to VCC1 and VCC2.
- (2) Short circuit the VCC1, VCC2, and EN pins.

When using method (1), apply power to VCC1 and VCC2 simultaneously, or in the order of VCC1 to VCC2, then to the EN pin.

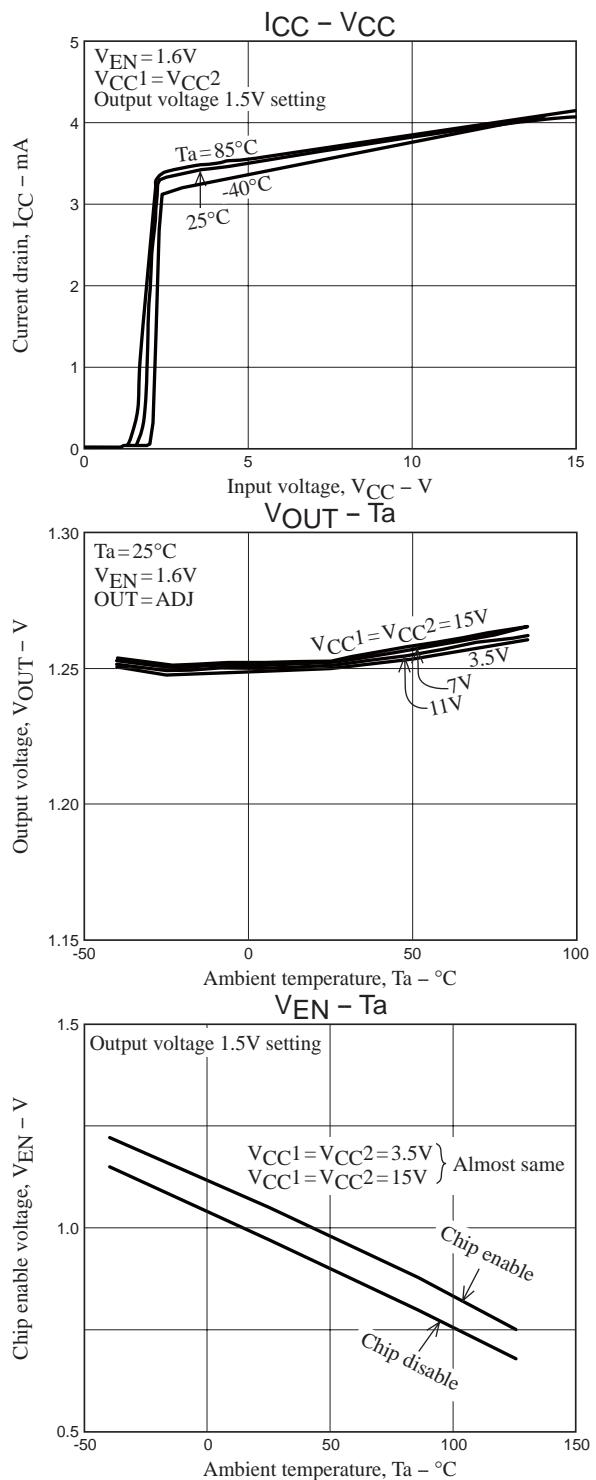

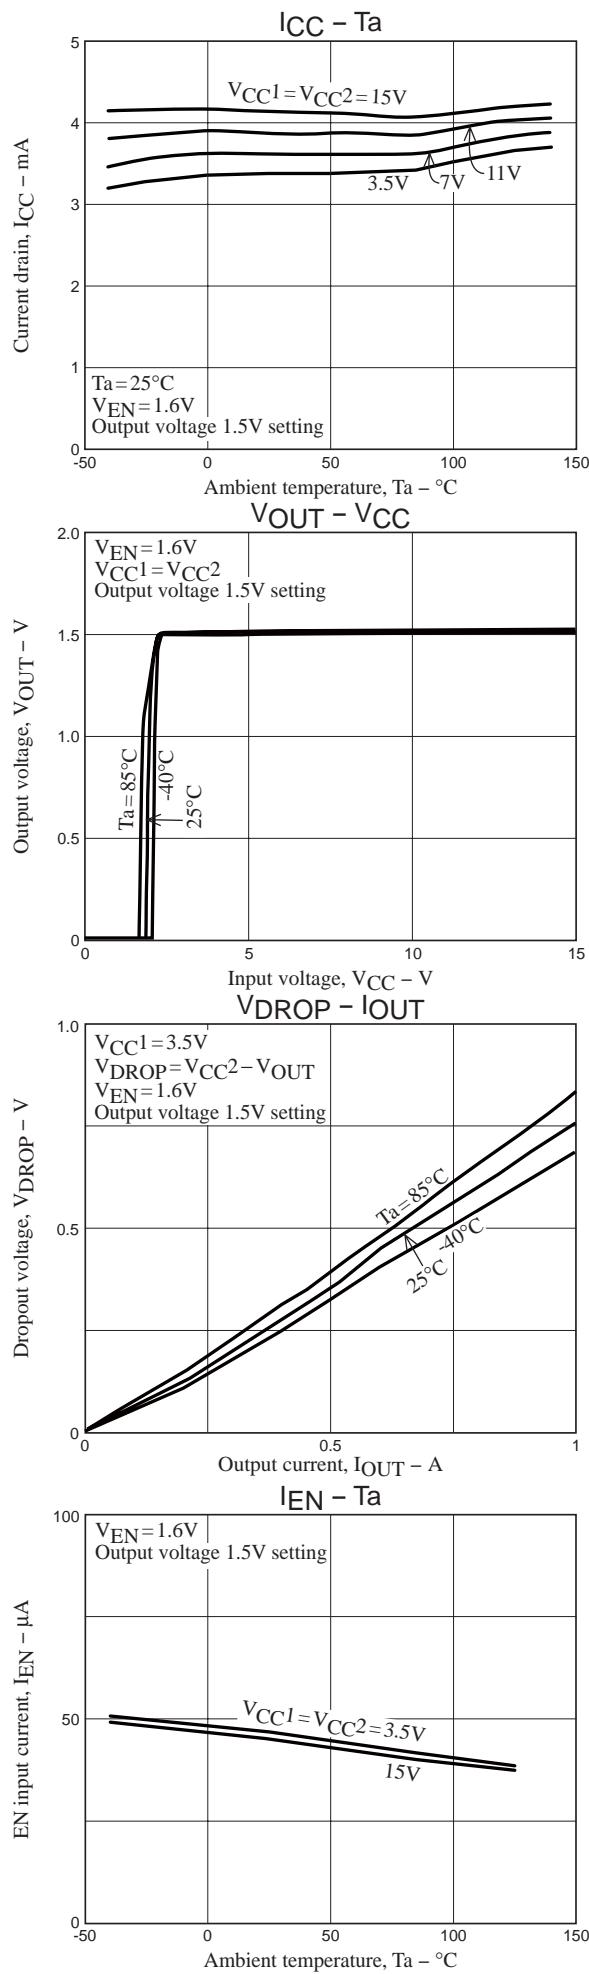

To shutdown the IC, follow the start-up procedure in reverse order.

Pin Function

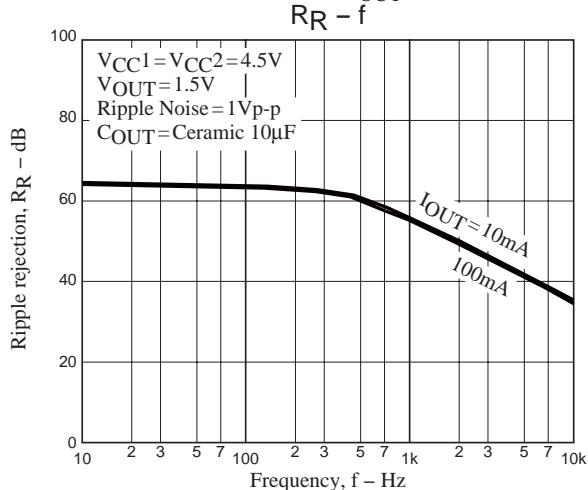

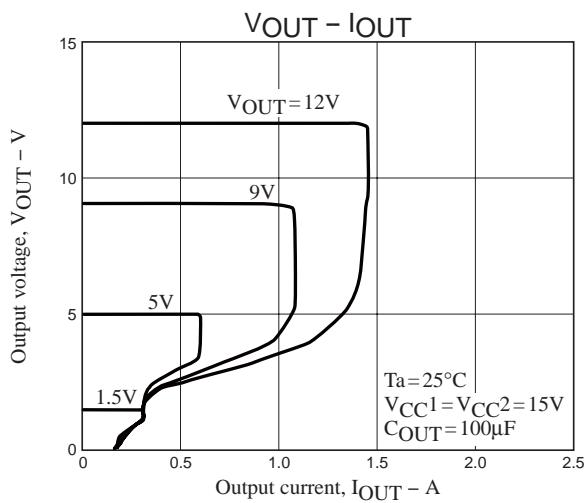

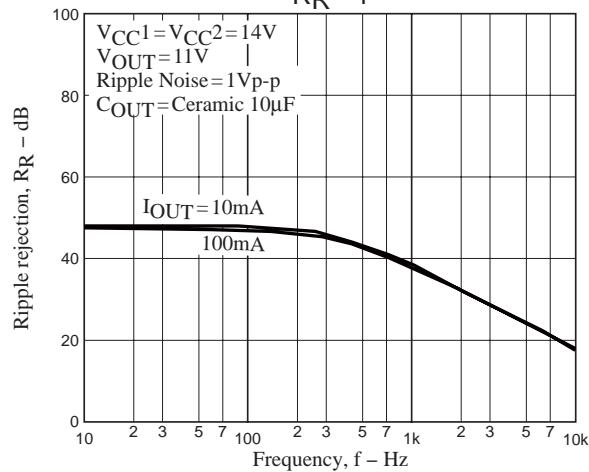

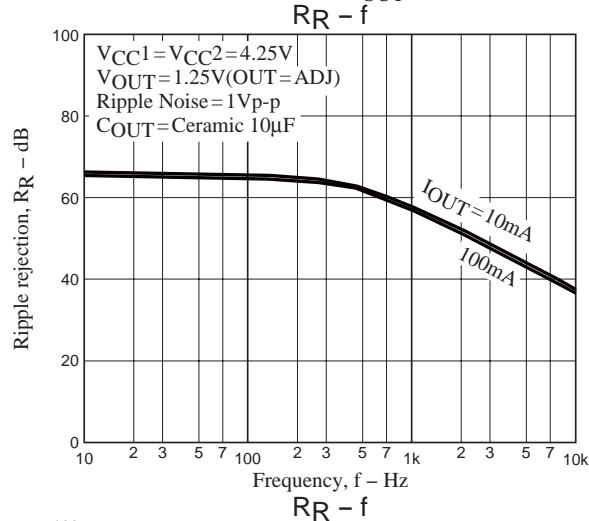

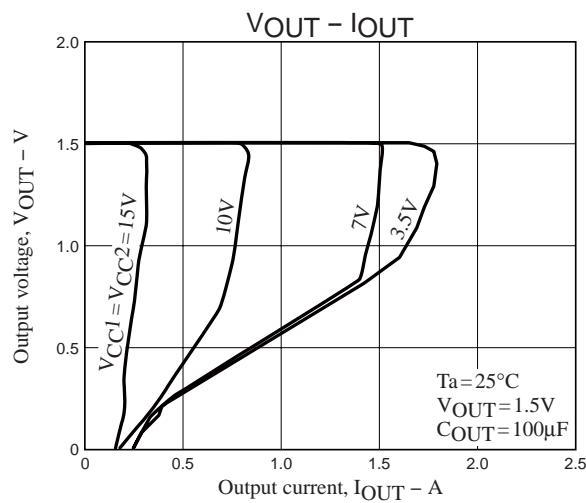

Pin No.	Pin name	Function	Equivalent circuit
1	OUT	Output.	
2	ADJ	Adjustable input.	
3	NC	No connection.	
4	GND	Ground. Connect to Pin 5 internally.	
5	GND	Ground. Connect to Pin 4 internally.	
6	EN	Chip Enable. (High Enable)	
7	VCC1	Analog power supply.	
8	VCC2	Output power supply.	

*4 When you use this IC, Please short-circuit Exposed-Pad and GND-pin on the IC mounting side.
