

### S8016xA Series

#### Main Features

Symbol	Value	Unit
$I_{TRMS}$	16	A
$V_{DRM}/V_{RRM}$	800	V
$I_{GT}$	50	mA

#### Schematic Symbol

#### Description

The Littelfuse SCR S8016xA series are specifically designed for Electric Vehicle On-Board Charger (EVOBC) applications. This SCR AC line input rectifier can handle Level 1 charging up to 16Arms at 120V, and Level 2 charging up to 16A rms at 240V at 100°C and up to 25A rms for 80°C. Its excellent AC handling capability and surge robustness makes this series an ideal switch for these input rectifiers.

#### Features & Benefits

- $V_{DRM}$  800V,  $I_T$  25rms to handle input from 100-250V line AC
- High di/dt of 375/ $\mu$ sec enables handling of 3kA 8/20 surge current operationally
- High  $V_{DSM}/V_{RSM}$  of 1300V, high dv/dt of 2000V/ $\mu$ sec prevents SCR mis-triggering during 6kV 1.2/50-8/20 surge event with minimal over voltage protection or snubber circuit
- Available in the compact TO-263 SMT package
- AEC-Q101 Qualified
- Halogen free and RoHS compliant

#### Applications

Input rectification of AC line input for EVOBC applications.

#### Absolute Maximum Ratings

### Physical Specifications

<b>Terminal Finish</b>	100% Matte Tin-plated
<b>Body Material</b>	UL recognized compound meeting flammability rating V-0.
<b>Lead Material</b>	Copper Alloy

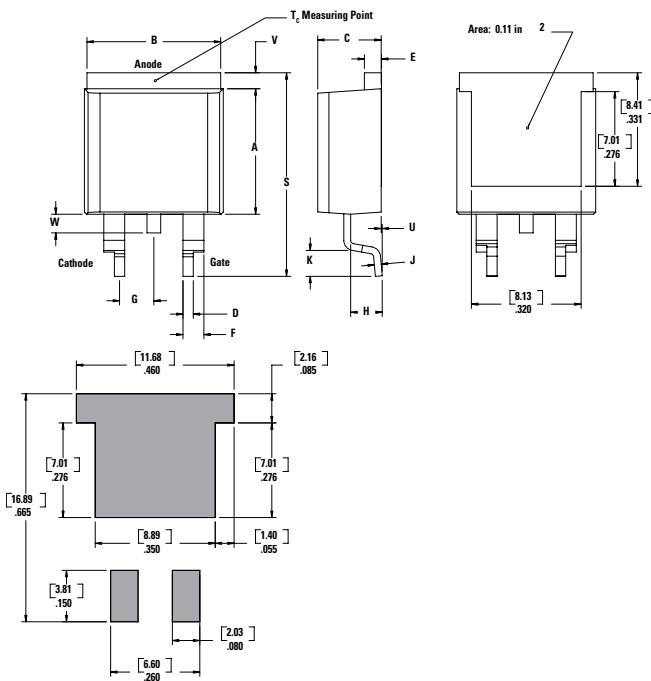

### Design Considerations

Careful selection of the correct component for the application's operating parameters and environment will go a long way toward extending the operating life of the Thyristor. Good design practice should limit the maximum continuous current through the main terminals to 75% of the component rating. Other ways to ensure long life for a power discrete semiconductor are proper heat sinking and selection of voltage ratings for worst case conditions. Overheating, overvoltage (including dv/dt), and surge currents are the main killers of semiconductors. Correct mounting, soldering, and forming of the leads also help protect against component damage.
