

# 1:10 Clock Fanout Buffer

#### Features

- Low voltage operation
- Full range support: □ 3.3 V □ 2.5 V
  - □ 1.8 V
- Over voltage tolerant input hot swappable
- 1:10 Fanout
- Drives either a 50-Ohm or 75-Ohm load
- Low input capacitance
- Low output skew
- Low propagation delay
- Typical (t<sub>pd</sub> less than 4 ns)
- High speed operation:
  200 MHz at1.8 V
  650 MHz at 2.5 V and 3.3 V

## Logic Block Diagram

- Industrial temperature range
- Available in SSOP package

#### **Functional Description**

The Cypress series of network circuits are produced using advanced 0.35 micron CMOS technology, achieving the industry's fastest logic and buffers.

The Cypress CY2CC910 fanout buffer features one input and 10 outputs. It is ideal for conversion from and to 3.3 V, 2.5 V, and 1.8 V.

Designed for Data Communications clock management applications, the large fanout from a single input reduces loading on the input clock.

## CY2CC910

## **Maximum Ratings**

Exceeding maximum ratings<sup>[1]</sup> may shorten the useful life of the device. User guidelines are not tested.

| Storage temperature:               | . –65° C to +150° C |
|------------------------------------|---------------------|
| Ambient temperature:               | –40° C to +85° C    |
| Supply voltage to ground potential |                     |

## **DC Electrical Characteristics**

| V <sub>CC</sub>                    | –0.5 V to 4.6 V                 |
|------------------------------------|---------------------------------|
| Input                              | –0.5 V to 5.8 V                 |
| Supply voltage to ground potential |                                 |
| (Outputs only)                     | –0.5 V to V <sub>DD</sub> + 1 V |
| DC output voltage                  | –0.5 V to V <sub>DD</sub> + 1 V |
| Power dissipation                  | 0.75 W                          |
|                                    |                                 |

Note

Stresses greater than those listed under absolute maximum ratings may cause permanent damage to the device. This is intended to be a stress rating only and functional operation of the device at these or any other conditions above those indicated in the operation sections of this specification is not implied. Exposure to absolute maximum rating conditions for extended periods may affect reliability.

## **DC Electrical Characteristics**

#### At 1.8 V (See Figure 6)

| Parameter       | Description         | Test Condition <sup>[2]</sup> | Min                          | Max                          | Unit |
